INTRODUCTION

EAT WELL AND LIVE WELL

Eating well and living well will help us prevent chronic illness in the first place.

Start with excellent Nutrition:

Improving the diet will address imbalances in all body systems at once and is the most efficient, economical and holistic way to address the underlying causes of illness. Nutritional supplements won't compensate for a bad diet.

Ensure vibrant health by following these guidelines:

- Include healthy fats in your diet
- Eat food that is as fresh, whole and unprocessed as possible
- Eat as wide a variety and as colourful as possible
- Choose products from clean sources: free range, grass-fed and organic beef, dairy and chicken; sustainably caught and mercury free fatty fish; organic fruit and vegetables
- Keep hydrated with clean, filtered water
- Probiotics and enough fibre in the diet will make a huge difference in many illnesses
- Avoid sugar and refined carbohydrates, as well as artificial sweeteners
- Avoid processed foods, factory-farmed animal products, caffeine and alcohol
- Avoid additives such as preservatives, colourants, flavourants and flavour enhancers
- Avoid hydrogenised-, partially hydrogenated - and trans fats found in margarine and baked goods

Cultivate a healthy lifestyle:

Getting the basics right will often be the crucial missing step in beating chronic illness:

- Rest and sleep well
- Spend time outside
- Partake in regular, enjoyable, moderate exercise
- Stay connected with yourself, your community and with nature
- Manage stress with meditation, mindfulness and breathing exercises
- Lessen your toxic exposure by switching to non-toxic and organic body care, make-up and house cleaning products
- Limit time spent on cellphones or near wireless devices

ADDRESS THE UNDERLYING CAUSES

The causes of almost all chronic disease can be traced to immune dysfunction, chronic inflammation, ongoing stress and overall toxicity.

All of these factors can be addressed efficiently and powerfully with the nutritional and lifestyle advice above.

Always address these foundational causes as part of ongoing customer support and education - it is a simple conversation that shows you care.

IMMUNITY

When the immune system is weak, we are prone to fall ill from every infectious disease making the rounds or cancer might develop unrestricted. Wounds might become infected easily and complications may arise after minor surgeries. Similarly, if the immune system is constantly on high alert autoimmune diseases such as lupus, multiple sclerosis, fibromyalgia, rheumatoid arthritis, type 1 diabetes and Hashimoto's thyroiditis may develop.

INFLAMMATION

It is known that almost all chronic diseases have inflammation at their root, from arthritis, inflammatory bowel disease and cancer to Alzheimer's and Parkinson's disease. Our bodies and brains are on fire and we have to douse the flames with good nutrition, by managing stress, and by addressing chronic low grade infections and allergic reactions.

STRESS

Unrelenting stress causes hormonal and blood sugar imbalances and body wide inflammation. It may lead to anxiety, high blood pressure, heart disease, suppression of the immune system and impair mental health.

TOXICITY

We are bombarded with toxins on a daily basis from the food we eat, the water we drink, the air we breathe, the body care and home care products we use - our entire environment has become extremely polluted and the cumulative burden is overwhelming our detoxification systems. Many nervous system and endocrine disorders can be attributed to environmental toxins.

See the individual chapters for detailed recommendations on how to address these underlying causes of ill health.

CUSTOMER CARE AND SELLING SKILLS

We do not diagnose, prescribe or make claims for medicines

- "It sounds like you have pneumonia"
- "We recommend this cream for eczema"
- "This turmeric will cure cancer"

The role of the sales person is to provide information and different options. It is the customer's responsibility to make the correct choice for his/her health and wellness

- "These are the options that will support your body when you have the flu."
- "These are the differences between the products and the prices. Which product would you prefer?"

Ask the right questions to identify the correct products to suggest to your customer

- What caused the onset of these symptoms?
- For how long have you experienced these symptoms?
- What have you used in the past to treat the condition? What was the outcome?
- Are you currently using any natural medicines for this condition? Is it effective?
- Are you on any chronic medication?
- Are you on any blood-thinning medications?
- Do you have any allergies?
- Are you on anti-depressants or anxiety medicines?

Factors to take into consideration to match the correct product to your customer

- Is the patient a child, a pregnant or lactating woman, elderly or very weakened?
- Do they have any preferences or special requirements? Value for money, quality, convenience, vegan/vegetarian, specific diets, allergies and intolerances, cruelty-free or environmentally friendly.

When to refer a customer to a qualified practitioner

- When they are on chronic medicine - many foods, herbs and supplements might have interactions with chronic medication.
- When natural medicines do not have a positive effect on acute conditions within 24 to 48 hours of taking them.
- Chronic conditions take longer to achieve results with natural medicines and diet changes, especially hormonal imbalances.

COMMON CONTRA-INDICATIONS

Activated Charcoal

A potent natural treatment used to trap toxins and chemicals in the digestive system, allowing it to be flushed out so the body doesn't reabsorb it. Activated charcoal is made from a variety of sources, but when used for natural healing, it's important to select activated charcoal made from coconut shells or other natural sources. One of the most popular activated charcoal uses is for the safe and effective treatment of poisoning and drug overdoses, stomach bugs, excess alcohol consumption and diarrhoea. It is not intended for long term use as it may absorb important nutrients or medications.

Anti-anxiety & anti-depressant medicines

Many people are on anti-depressants and anti-anxiety medications which are contraindicated for use with St John's Wort, 5HTP and Sceletium.

Arnica tablets

Thins the blood if used over a long period of time.

Arnica gel, oil or ointment

Prevents blood from clotting, do not use on broken skin.

Berberine

Berberine is one of the few plant compounds known to activate adenosine monophosphate-activated protein kinase (AMPK), the metabolic master switch. Berberine may benefit diabetes, metabolic syndrome, obesity, heart health and gut health. Berberine has been shown to control blood sugar and lipid metabolism as effectively as the diabetes drug Metformin.

Avoid recommending berberine in the following instances:

- Berberine may decrease how fast the liver breaks down chronic medications. These medications then may have a longer life and potentially have a stronger effect than intended. Avoiding berberine while on medication is similar to avoiding grapefruit juice when taking certain medications. Grapefruit juice has an enzyme that prevents drugs from breaking down in the body as quickly as intended
- **It's unsafe to take berberine in pregnancy.** Berberine may cross the placenta and might cause harm to the fetus. Kernicterus, a type of brain damage, has developed in newborn infants exposed to berberine. It's also unsafe to take berberine when breast-feeding as berberine may be transferred to the infant through breast milk
- Berberine may cause blood sugar to become too low if taken by diabetics who are controlling their blood sugar with insulin or medications. Use with caution in people with diabetes.
- Goldenseal contains berberine
- Too much berberine at once can result in stomach upset, cramping, and diarrhoea. Recommend gradually building up to maximum dosage
- Should not be taken on an ongoing basis - take for 2 months and break for 1 month.
- Support liver with milk thistle while on berberine

Black Seed (Nigella sativa)

Black seed is also called black cumin, and is available in capsule and oil form. It is said to have a number of beneficial properties - it can lessen inflammation, relieve pain, fight infections and reduce fevers. Black seed is also thought to prevent and inhibit the development and metastasis of cancer cells.

However, black seed may cause side effects in some people.

- It may interfere with the effectiveness of other medicines so should not be recommended if patients are on chronic medicine. It can lower blood pressure to the point of hypotension, especially if they are taking a diuretic or antihypertensive medication
- Women who are pregnant should not take black seed for any purpose, as it may affect the smooth muscle contractions of the uterus
- Black seed is also known to adversely interact with both chemotherapy medications and radiation as it acts like an antioxidant in the body
- Black seed oil may thin the blood, do not recommend for someone that uses blood thinning medication.
- In theory, black seed might increase the risk for bleeding and interfere with blood sugar control and anesthesia during and after surgical procedures. Stop using black seed at least two weeks before a scheduled surgery

Curcumin (Turmeric)

A potent anti-inflammatory used for brain health and neurodegenerative decline, cardiovascular health, joint health, as well as gut health and detoxification.

- Curcumin has antiplatelet effects, so it's not suitable for people on anti-coagulants (blood thinning medication)
- It may also increase the concentration of other medication in the blood - use with caution in patients who are on chronic medication, especially diabetes
- Do not recommend for patients with gallstones or gallbladder disease
- Do not recommend for patients who are pregnant
- High doses of curcumin may produce nausea and gastrointestinal complaints, recommend to build up to higher dosages. Doses of up to 8 grams of curcuminoids aren't associated with serious adverse effects in humans
- Use of curcumin with piperine may cause adverse drug reactions, as piperine greatly increases intestinal permeability

Echinacea

Echinacea offers immune system support for prevention and treatment of upper respiratory tract infections (cold, flu, coughs, and sore throats) and urinary tract infections. It is an anti-bacterial, anti-viral and anti-inflammatory remedy. Extra supplementation when the body is under stress may prevent or treat infections.

- Not for long term use for people with auto-immune diseases like rheumatoid arthritis, multiple sclerosis or lupus. In these cases recommend to take echinacea short-term only (up to 10 days) to treat colds and other minor infections
- Contra-indicated for people who have tuberculosis, or who are on immune-suppressive medication (cancer treatment or organ transplants) or suffering from HIV/Aids
- Echinacea should not be taken for longer than a period of eight weeks. A break of three weeks must be taken between courses

Essential Oils

Keep oils out of reach of children. Essential oils are not to be taken internally. Not all oils are suitable for children or pregnant women. Some oils are toxic when overused. Always advise essential oils to be used with a carrier oil as they are very concentrated. Use 1 or max 2 drops of essential oils per 5 ml of carrier oil.

- **Oils not to be used in pregnancy and on babies:** Basil, Black Pepper, Camphor, Cedar Wood, Cinnamon, Clary Sage, Fennel (Sweet), Hyssop, Juniper, Marjoram, Myrrh, Nutmeg, Origanum, Pennyroyal, Peppermint, Rose, Rosemary, Sage and Thyme
- **Oils not to be used by anybody suffering from high blood pressure:** Black Pepper, Hyssop, Rosemary, Sage and Thyme
- **Oils not to be used by anybody suffering from epilepsy:** Camphor, Eucalyptus, Fennel, Hyssop, Rosemary, Sage, Spike Lavender (*Lavandula Latifolia*) and Wormwood

- **Oils that make the skin sensitive to ultraviolet light (sunlight and sunbeds):** Angelica, Bergamot, Cumin, Grapefruit, Lemon, Lemon Verbena, Lime, Orange and Verbena

- **Possibly hazardous and toxic essential oils:** Almond, Aniseed, Cinnamon Bark (Cinnamon leaf is not hazardous), Camphor, Clove Bud, Origanum, Pine, Sage, Wintergreen and Wormwood

Fat Soluble Vitamins

Fat-soluble vitamins such as vitamins A, D, E, and K are stored in the fatty tissues of the body and the liver. Vitamin toxicity is possible because of the build-up of these vitamins in the body.

Advise regular blood tests to determine levels.

Green Tea

Thins the blood. Green tea also contains caffeine, so caution when advising to clients who are sensitive to caffeine. Should not be consumed late at night as may interfere with ability to fall asleep.

Goldenseal

Goldenseal may thin the blood. Do not use Goldenseal during pregnancy or breast-feeding. Brain damage (Kernicterus) has developed in newborn infants exposed to berberine in Goldenseal. Goldenseal should not be used in cases of kidney disease. It should be avoided in acute inflammation of the stomach.

Herbs

Although herbs are considered natural, they are very powerful medicines and might interact with or interfere with the effectiveness of chronic medicines.

Some herbs, including garlic, ginkgo, ginseng, and St. John's Wort, may have a significant influence on chronic medicines. Herbal medicines may mimic, decrease, or increase the action of prescribed drugs. St John's Wort has many contra-indications, notably with oral contraceptives, anti-anxiety and anti-depression medicines (SSRI's).

Always recommend not taking herbs and chronic medicines at the same time, and to keep monitoring for potential interactions by maintaining routine testing, such as blood coagulation tests given to users of Warfarin.

Always recommend that customers only take herbs under supervision of their physician. If going in for surgery stop taking all supplements 10 days before surgery.

- **Herbs that interact with blood thinning medications or anti-inflammatory medications:** Bilberry, Bromelain, Cayenne, Chamomile, Curcumin, Dong Quai, Fenugreek, Feverfew, Flaxseed Oil, Garlic, Ginger, Ginkgo Biloba, Ginseng, Goldenseal, Green Tea, Horse Chestnut, Meadowsweet, Motherwort, Red Clover, St John's Wort and Willow

- **Brand names of blood thinning medication include:** Warfarin, Heparin, Coumadin, Xarelto and Pradaxa

- **Brand names of Non-steroidal anti-inflammatory drugs (NSAID's) include:** Aspirin, Ecotrin, Voltarin, Celebrex, Advil, Brufen and Myprodol

- **Herbs that interact with Diabetes medications:** Aloe Vera, Astragalus, Black Seed Oil, Berberine, Bitter Melon, Curcumin, Fenugreek, Garlic, Ginger, Gymnema, Korean Ginseng, American Ginseng and St John's Wort

Honey

Children under the age of 1 years old should not consume honey. Natural bacteria may cause infant botulism, a rare bacterial infection in the large intestine. Symptoms include muscle weakness; difficulty breathing, eating and nursing; loss of head control; a weak cry and constipation. Pasteurisation does not help, the spores are still present in the honey.

Iron

Toxicity symptoms include nausea, vomiting, cramps and constipation. Excessive iron from supplements can be toxic to children, causing serious health problems and even death. Always recommend to have iron levels tested to see if customers need to be taking iron, it seems customers often think they needed to be taking iron rather than B complex when fatigued.

Liquorice

In Chinese medicine, the adaptogenic and anti-inflammatory liquorice root has been used for centuries for coughs and colds, gastrointestinal issues (acid reflux, heartburn, leaky gut), and female reproductive issues and PMS, as well as adrenal fatigue and pain relief.

The side effects of liquorice root are primarily connected to a compound called glycyrrhizin.

- Liquorice will raise low blood pressure. Persons with high blood pressure should not take liquorice.
- Do not use liquorice root when pregnant, as it may increase risk of early delivery or miscarriage.
- Do not use liquorice if there are heart, liver or kidney issues.
- Liquorice in supplement form may have oestrogen-like effects on female hormone sensitive conditions (breast cancer, uterine cancer, ovarian cancer, endometriosis, uterine fibroids).
- It may also worsen hypertonia (a muscle condition caused by nerve disease), potassium deficiency (hypokalemia) or erectile dysfunction.
- Stop taking liquorice root two weeks before surgery, as it may interfere with blood pressure control during surgical procedures.

DGL (Deglycyrrhised Liquorice) is recommended in all the above cases.

While liquorice root extract shouldn't be taken longer than 1–3 months straight, DGL liquorice can be taken long-term.

Oils

Omega 3 oil and Flax seed oil will thin the blood when used in high dosages.

Red Yeast Rice

Red Yeast Rice is found in many natural and alternative cholesterol medicines.

RYR supplements should not be taken:

- While breastfeeding, pregnant or trying to become pregnant
- If there is kidney disease, liver disease, thyroid issues, musculoskeletal disorders or a high risk of cancer
- When someone has had an organ transplant
- If more than two alcoholic beverages are consumed per day
- It is recommended to avoid taking red yeast rice together with the following medications:
Statins or other cholesterol drugs, antidepressants, antifungal drugs, immune system suppressing drugs, antibiotics, HIV medicines

If muscle aches and weakness are experienced, recommend that the customer discontinue use of red yeast rice and contact their health care provider immediately.

Sulphur

One of the most notable attributes of MSM supplements is that they help accelerate healing and “detox” the body by improving how chemicals enter and leave our cells. MSM essentially makes cells more permeable, releasing certain built-up minerals that can cause problems (like calcium, for example), heavy metals, waste and toxins, while also helping usher in nutrients and water. For this reason it may also enhance the absorption of medicines taken at the same time, so be mindful to mention this to customers who are on chronic medicines. It’s also not suitable for people taking blood-thinning medications.

Tissue Salts

- **Kali Mur (#5):** Thins bodily fluids, will thin the blood if used over a long period of time
- **Silica (#12):** Expells foreign matter from the body, such as pacemakers, securing screws, plates, tubes and contraceptive coils. Not for use in pregnancy

Vitamin E

Thins the blood.

How to use this manual:

- Ask questions until you understand the bigger picture of what your customer wants to achieve and which symptoms they would like to address first or that are acute. You need information to personalise your recommendations and to keep the customer safe
- Know which important ingredients to look out for and why they are important for each illness or disorder. You must be able to motivate to the customer why you are recommending a product. These are listed under **Important ingredients**
- Look for a formulated product that contains all or most of the ingredients that will address your customer's specific concerns or the symptomatic picture of the illness. It is convenient and economical to use an all in one product. Formulated product suggestions are listed under **Choose from these products**. Always give the customer different options to choose from and highlight the differences between products. Suggest products from a different price range if they are looking for more budget friendly options
- Suggest foods or add on products that will support the main recommendation or give the customer greater benefit together with the main recommendation. Helpful suggestions are listed under the heading **Add on**
- Suggest long term nutritional and lifestyle adjustments to address the deeper causes of the illness, e.g. stress management, improving diet, avoiding inflammatory foods, avoiding toxins etc. Helpful recommendations are listed under **Dietary & Lifestyle advice**

CARDIOVASCULAR HEALTH

BLOOD PRESSURE

Blood pressure is the pressure of your blood on the walls of your arteries as your heart pumps it around your body. It's a vital part of how your heart and circulation works. Your blood pressure naturally goes up and down all the time, adjusting to your heart's needs depending on what you are doing. Blood pressure that is persistently low is called **hypotension**, and pressure that is consistently high is called **hypertension**. Both have many causes and may be of sudden onset or of long duration.

HIGH BLOOD PRESSURE (HYPERTENSION)

Long-term hypertension is a risk factor for many diseases, including heart disease, stroke and kidney failure.

Causes of high blood pressure include a high-salt diet; emotional stress; use of alcohol and caffeine; smoking; obesity; inactivity; arteriosclerosis (hardening of the arteries).

The best way to know if you have high blood pressure is to have your blood pressure checked by your doctor or health practitioner.

Protocol:

Magnesium + Herbal tonic (Arjuna or Hawthorn or Pressure Eeze) + Blood thinner/anti-inflammatory (Omega 3, Garlic or Ginkgo biloba)

Important ingredients:

- B6, B12 and Folate to lower the amino acid homocysteine. High levels are linked to cardiovascular disease
- Vasodilators that increase nitric oxide levels and widen blood vessels: CoQ10, cacao, L-arginine, garlic, beetroot, pomegranate, curcumin, leafy greens
- Omega 3: anti-inflammatory & blood thinner
- Magnesium: relaxes blood vessels
- Co-enzymeQ10: an antioxidant important for supporting heart health. Critical if patient has had a heart attack or on statins (cholesterol lowering drugs)

Choose from these products:

- Metagenics Mg/K: Magnesium and potassium to balance calcium and sodium intake
- Solgar Hawthorn or Himalaya Arjuna: Cardiotonic and cardio protective
- Tibb Pressure-eeze or Pressure-eeze forte

Add on:

- Pink Himalayan Salt
- Dr Vogel Herbamare or Trocomare salt
- Garlic: blood thinner and clears arteries
- Beetroot juice: dilates arteries and high in anti-oxidants
- Pomegranate juice: clears arteries and high in anti-oxidants
- Dark chocolate
- Buchu or Hibiscus tea
- Lavender, Ylang ylang, Clary sage and Frankincense essential oils

Dietary & lifestyle advice:

- Eat a high fibre diet with abundant fruit, vegetables and healthy sources of protein, seafood and Omega-3 rich oils.
- Eat potassium rich foods such as spinach, avocado, melon and watermelon and bananas and drink potassium rich coconut water to counteract the effects of sodium
- Lower sodium (salt) intake – replace with Pink Himalayan Salt
- Avoid high sodium (salt) processed foods, pickles, olives, chips or canned foods
- Avoid trans fats and Omega-6 fats which increase inflammation and blood pressure and are found in fast foods, packaged foods, margarine and conventional meats
- Avoid sugar and refined carbohydrates
- Keep weight in a healthy range
- Exercise regularly
- Manage stress with relaxation techniques such as deep breathing, yoga, journaling or art therapy

**LOW BLOOD PRESSURE (HYPOTENSION)**

Generally speaking, low blood pressure (hypotension) is regarded as a sign of good health. It is most likely the result of genetic factors and suggests that your risk of heart disease is lower than normal.

Very low blood pressure can restrict the amount of blood and oxygen flowing to your brain causing dizziness and light headedness, or fainting. Common causes of low blood pressure include dehydration, a lack of nutrients in the diet, and rapid fluid loss due to heat stroke, diarrhoea, and vomiting. These causes may be quickly remedied by balancing electrolyte and fluid levels.

In rare cases, low blood pressure may suggest a serious medical problem, such as a cardiac, endocrine, or neurological disorder. Low blood pressure can develop during pregnancy, and while taking certain medications (diuretics, beta blockers, antidepressants, medications used to treat Parkinson's disease and alcohol). Combining other drugs with medications prescribed for high blood pressure or blood pressure medications themselves can sometimes cause abnormally low blood pressure.

As we grow older, blood pressure can drop suddenly when we stand up, a common concern which can be compounded by prolonged bed rest, pregnancy, dehydration, diabetes, heart problems or the effects of certain drugs.

Important ingredients:

- Liquorice: known to increase blood pressure. However, consuming too much may cause a depletion of potassium, which may lead to dangerously low blood pressure. Take care to include potassium rich foods in the diet and avoid overconsumption of liquorice
- Hawthorn: a cardiac tonic that normalises blood pressure
- Vitamin B12 and folate: deficiency may lead to anemia and also cause hypotension
- Vitamin D: deficiency is linked to hypotension, especially among older women
- Vitamin C: This may help blood vessels constrict to normalize blood pressure

Choose from these products:

- Phytoforce Liquorice root or Hawthorn tinctures
- Solgar Hawthorn Berry

Add on:

- Liquorice tea
- Liquorice sweets
- Nettle tea

Dietary & lifestyle advice:

- Eat more sodium in the form of pink Himalayan salt
- Drink enough healthy fluids to increase blood volume
- Avoid drinking excessive amounts of alcohol
- Wear compression stockings
- Avoid sudden position changes
- Avoid diuretics
- Avoid hot baths and long, hot showers
- Avoid physical strain
- Take up mild exercise

CHOLESTEROL

Cholesterol is a naturally occurring substance that is present in all of us and crucial for survival. It's made by the liver and required by the body for proper functioning. Cholesterol is integral to your cell membranes and is critical for nerve function. Every nerve in the body is covered in fat (cholesterol). Sixty percent of the brain is composed of fat and cholesterol is vital for the production of sex hormones. Fat soluble vitamins are only taken up by the body in the presence of fat. Cholesterol in our body is present in the form of fatty acids (lipids) that travel through the bloodstream. These particles normally don't build up in the walls of the arteries, but when inflammation levels go up, low-density lipoprotein (LDL), also known as "bad cholesterol," builds up in the arteries and dangerously forms plaque clots, cutting off blood flow and setting the scene for a heart attack or stroke.

Cholesterol itself wouldn't be nearly as dangerous without inflammation. Inflammation is the primary cause of atherosclerosis, the hardening and stiffening of arteries that accompanies plaque deposits and in turn produces even more inflammation. Inflammation is at the root of most diseases, and heart disease is no exception. Inflammation is caused by sugar and refined carbs, not fats.

Protocol:

Omega 3 + Formulated product + Liver support + fibre

Important ingredients:

- Omega 3 oil: lowers LDL cholesterol, thins the blood and is anti-inflammatory
- CoenzymeQ10: critical for supporting heart health, especially if using statin drugs
- Milk thistle: for liver support

Choose from these products:

- Metagenics EPA DHA 720
- Metagenics Coratin with a CoQ10 product
- Coyne Healthcare Berberine
- Future Health Cholesterol Assist
- Flora Force Cholesterol Aid
- Nativa Cholest Complex
- Himalaya Abana
- Himalaya Liv52
- Wellness Milk thistle

Add on:

- Metagenics Ultrameal Cardio 360 medical food shake
- Garlic capsules
- Chia and flax seeds - fibre rich and packed with Omega 3 oils
- Olive oil, seeds and nuts
- Green tea
- Lemongrass essential oil

Dietary & lifestyle advice:

- Eat a high fibre diet with abundant fruit, vegetables, whole grains and legumes
- Consume oat bran to help remove excess cholesterol
- Include lean meats from grass fed, pasture raised and wild sources
- Eat omega 3 rich foods such as avocados, olive oil, nuts and seeds
- Avoid trans fats and hydrogenated oils
- Avoid low fat foods which contain sugar
- Avoid processed foods, artificial ingredients, sugars and refined carbs
- Cook with coconut oil

VARICOSE VEINS

Varicose Veins are typically visible as lumpy swellings on the legs. Normally muscle contractions in the legs help to push blood through veins back to the heart, and one way valves in the veins prevent blood from flowing backwards. Varicose veins occur mainly in the legs when the valves fail to close properly, causing back flow to occur and pressure to increase in the veins, making the veins swell.

Varicose veins are often caused by increased pressure from abdominal swelling in pregnancy or obesity, or by pressure in the lower legs due to prolonged standing. Varicose veins symptoms include aching, a feeling of heaviness, itching and swelling.

Protocol:

Anti-inflammatory + circulation + strengthen vein walls

Important ingredients:

- Omega 3: to reduce inflammation and increase blood flow
- Vitamin C: to reduce inflammation and protect veins
- Vitamin E: for natural blood thinning effects
- Herbs: Bilberry, Horse chestnut or Butcher's broom: to assist with lower leg circulation
- Rutin, Reveratrol or Quercetin to strengthen blood vessel walls

Choose from these products:

- Metagenics Venaplex
- Solgar Bilberry
- Solgar Rutin
- Solgar Horse Chestnut seed extract

- Flora Force Circulation formula
- Neogenesis Venaflow
- Tissue salt #1: to tone and shrink the veins and improve elasticity

Add on:

- Dr Organic Royal Jelly Leg & Vein Cream
- Cypress essential oil applied topically to increase circulation
- Lavender or Peppermint essential oils applied topically to relieve itching
- Apple Cider Vinegar or Witch hazel applied topically to reduce swelling
- Buckwheat (high rutin content) for its ability to strengthen the walls of the blood vessels

Dietary & lifestyle advice:

- Weight loss is recommended
- Low-impact exercise such as walking, swimming and bicycling
- Avoid standing for long periods and wear support stockings
- Eat an anti-inflammatory diet containing fibre rich vegetables and fruits
- Lower sugar and refined carbohydrate intake
- Add magnesium rich foods such as leafy greens, avocado, bananas, cruciferous veggies and sweet potatoes
- Add spicy foods such as curries and cayenne pepper to increase blood circulation

DETOXIFICATION

Our organs of filtration and elimination include the liver, lungs, kidneys, colon and skin.

The liver is the main organ involved in detoxification. Blood passes through it carrying toxins (medication, alcohol and chemicals), used hormones and waste from the cells that need to be processed and eliminated. If the liver is not functioning optimally, or the bowels cannot eliminate waste due to constipation, toxic waste can build up which is detrimental to our health. Fat soluble toxins are excreted in the bile becoming part of stools. Some toxins are made water soluble by the liver and these are excreted through the kidneys. The skin also eliminates toxins through sweat or rashes.

We are bombarded with toxins on a daily basis from the food we eat, the water we drink, the air we breathe and the body care and home care products we use. Our entire environment has become extremely polluted and the cumulative burden is overwhelming our detoxification systems.

Limit environmental toxin exposure in the following ways:

- Drink filtered water only, not bottled or tap water, to avoid xeno estrogens, heavy metals and chlorine
- Eat animals and plants from clean sources - pasture raised eggs, dairy products and meat, sustainably caught and mercury free fish, organic fruit and vegetables to avoid pesticides, growth hormones and antibiotics
- Switch to non-toxic body care and home cleaning products
- Limit or avoid smoking and drinking
- Limit electro-magnetic radiation exposure from cell phones and wireless devices
- Avoid plastics of all kinds to avoid xeno-estrogens

If there is a need to use detoxification products focus on supporting the liver, the kidneys and the lymph.

Our bodies detox naturally the whole time. Assist the body's efforts by removing toxins and allergens such as wheat and dairy from the diet, as well as refined foods, caffeine and alcohol. Eat 5 to 10 cups of fresh fruit and vegetables a day to add fibre and protective phyto-nutrients. Get your daily dose of antioxidants from colourful fruits and vegetables, leafy greens, all berries and cruciferous veggies, as well as green tea. This gentle and natural detox will protect the liver and the kidneys.

The Herxheimer Reaction is a short-term (from days to a few weeks) detoxification reaction in the body. As the body detoxifies, it is not uncommon to experience flu-like symptoms including headaches, joint and muscle pain, body aches, sore throat, general malaise, sweating, chills, nausea or other symptoms. Support the body with anti-oxidants such as vitamin C, Glutathione and NAC.

Protocol:

Fibre + Water + Formulated product (Liver + kidney + lymph support)

Choose from these products:

- Good Health Body Cleanse - comprehensive detox
- Heel Detox Kit – comprehensive detox
- Metagenics Advaclear
- Metagenics UltraClear Renew
- Solgar Milk Thistle/Dandelion Complex
- SevenPointFive Liver Detox
- Himalaya Liv52
- Good Health Liver Tonic 17500
- A. Vogel Boldocynara & Nephrosolid
- Tissue Salts #3, 10 & 11
- PhytoForce Phyto- Cleanse Detox Tea

Add on:

- Pukka Cleanse Tea
- NAC, vitamin C and Glutathione as anti-oxidants
- Turmeric and Selenium aids detoxification and glutathione activity in the liver
- Fibre products to ensure elimination
- Zeolite or charcoal to absorb toxins

Dietary & lifestyle advice:

- A whole food unrefined diet ideally made up of mostly vegetables and fruit
- Drink 1 - 2 litres of pure water
- Ensure enough dietary fibre to prevent constipation and ensure elimination
- Add fresh vegetable juices to the diet
- Avoid stimulants e.g. coffee, alcohol and sugar
- Avoid processed foods and additives
- Don't overeat and allow time to rest
- Skin brushing and saunas can help with elimination of toxins

NB: If on medication detox slowly and don't take herbs close to medication. The best option is to use Wellness Milk Thistle to help protect the liver.

DIGESTIVE HEALTH

BLOATING & FLATULENCE

Bloating and flatulence are usually symptoms of poor digestion. It is generally due to fermentation of food in the digestive tract as it is unable to be broken down due to insufficient enzymes. Fermentation is also done by good gut bacteria so experiencing a small amount of flatulence can be a sign of a healthy microbiome activity. Bloating and flatulence can also be caused by food intolerance.

Protocol:

Enzymes + Probiotic

Choose from these products:

- Metagenics SpectraZyme
- Sfera Digest-it
- Himalaya Gasex
- Iberogast
- Wellness Digestive Enzymes
- Schweden Bitters
- Amipro Colon Ecology
- Solgar Digestive Enzymes (including HCL)
- Solgar Vegan Digestive Enzymes
- Good Health Natural Digestion

Add on:

- Ginger, Peppermint and Fennel essential oils or teas
- Fermented foods and drinks
- Probiotic supplement

Dietary & lifestyle advice:

- Avoid foods that cause excessive bloating and or flatulence e.g. cabbage family and onion family
- Try proper food combining to avoid fermentation of foods
- Make sure to soak and cook legumes very well
- Avoid foods that may trigger intolerances e.g. wheat, gluten, lactose
- Xylitol and sorbitol can cause flatulence and bloating
- Chew food well
- Add more bitter foods to the diet: dandelion, endive, arugula and radicchio salad leaves, bitter coffee and bitter dark chocolate or aromatic and bitter herbs and spices

BLOOD SUGAR CONTROL

The foods that we eat fall into one of three categories: carbohydrates (sugars and starches), proteins and fats. Fats don't affect blood sugar, while carbohydrates do. Carbohydrates in our diets are turned into glucose, which is what gives cells most of their energy and helps fuel the majority of the body's many functions. Both carbs and fats are energy sources - fats produce more energy per gram than carbs.

Glucose is brought into cells by insulin, which is the hormone secreted by the pancreas that's most important for blood sugar control. When we eat carbohydrates our blood sugar rises, alerting the body to produce insulin to bring levels back to normal by ushering glucose into the cells. Too much glucose in the blood causes inflammation and damage to blood vessels. Insulin levels rise and fall in accordance with our diets and are also impacted by levels of other hormones, such as cortisol and adrenaline.

Supplements may be used to manage blood sugar levels but if customers are already on medication they should work with a practitioner and closely monitor their blood glucose levels.

Important ingredients:

- Alpha-Lipoic Acid (ALA), chromium, magnesium and zinc are all involved in blood sugar control
- Cinnamon, bitter melon, fenugreek and gymnema are well known herbs and spices involved in healthy glucose metabolism
- Probiotics and vitamin D may improve the function of pancreatic cells that produce insulin
- Fibre: Helps to prevent rapid rises in blood sugar

Choose from these products:

- Metagenics MetaGlycemX
- Metagenics Ultra Glucose Control
- Metagenics Wellness Essentials Healthy Balance
- Coyne Healthcare Berberine
- Good Health Glucozone
- MNI Antagolin

Add on:

- A fibre supplement or food

Dietary & lifestyle advice:

- Minimise anything made with refined flour and added sugars
- Choose natural sweeteners, including raw honey, organic stevia, dates, pure maple syrup or blackstrap molasses in small amounts
- Eat a source of protein, fibre and healthy fats with all of your meals to help stabilise blood sugar, especially when you consume carbs such as starchy veggies like potatoes, fruit or whole grains
- Minimise alcohol especially sweetened alcoholic drinks such as dessert/fortified wines, sherries, liqueurs, mixed drinks with juice and ciders
- Doing about 30–60 minutes of exercise most days of the week (such as running, cycling, swimming and lifting weights) is also a simple, beneficial way to lower inflammation, manage stress, improve immunity and balance hormones. Insulin is increased so your cells are better able to use any available insulin to take up glucose during and after activity
- Manage stress - excessive stress can actually cause blood sugar levels to rise due to an increased release of cortisol

CONSTIPATION

Constipation is when there is difficulty passing stools, when stools are hard and infrequent, or there is incomplete bowel movements. Stools should be well formed and soft and pass with ease. Bowel movements should take place at least once a day. Transit time should be 12 - 18 hours - this can be tested by eating corn or beetroot and see how quickly it appears in your stools. Age, medication, stress, lack of fibre in the diet, dehydration and IBS can cause constipation to occur.

Protocol:

Magnesium + Fibre + Water + Laxative (if needed)

Important ingredients:

- Magnesium - helps to relax the colon and assists with peristalsis
- Fibre - both soluble and insoluble fibre to soften stools and help move them along

Choose from these products:

- Metagenics MetaFiber powder
- Amipro Colon Ecology
- Solgar Multiple-fibre formula
- Good Health Multi Fibre
- Himalaya Triphala or Good Life Organic Triphala Powder

Laxatives:

Should not be used long term, rather tend to the cause by modifying diet

- Amipro Magnozone
- Aim Herbal Fibreblend
- Flora Force Aloe Bitters
- Natures Choice Super Bowel Flush
- PMR Colon Active
- Cabbage juice or salt water flush

Add on:

- Soluble fibre: psyllium husks, oat bran, soaked chia seeds or linseeds
- Probiotic and Digestive Enzymes
- Prune juice or dried prunes

- Tissue Salt #1 for tissue elasticity
- Aloe Vera juice - softens the stool, heals the digestive tract
- Pegasus constipation: for children and when travelling: stress related constipation

Dietary & lifestyle advice:

- Diet plays an important role in constipation, increasing fibre and fluid intake is vital
- Both insoluble fibre (add bulk to stool) and soluble fibre (adds water to stool, softens stool) is important
- High fibre foods: vegetable, fruit and legumes can all help
- Do not ignore the body's urge - make time to have a bowel movement
- Make sure to relax and breathe deeply, if anxious about bowel movements then may struggle to go
- Massaging the abdomen with a citrus oil e.g. Grapefruit or Orange. Add Rose geranium or Lavender if anxious
- Ensure adequate fluid intake when taking fibre supplements - 1 to 2 litres per day. Take two hours away from medications as fibre reduces absorption of some medications

DIARRHOEA

Diarrhoea is the frequent passage of loose, watery, soft stools with or without abdominal bloating, pressure, and cramps.

Viral infections cause most cases of diarrhoea and are typically associated with mild-to-moderate symptoms with frequent, watery bowel movements, abdominal cramps, and a low grade fever. Viral diarrhoea generally lasts approximately 3 to 7 days.

Bacterial infections occur after eating contaminated food or drinks and is referred to as food poisoning. Symptoms may be severe, often with vomiting, fever, and severe abdominal cramps or abdominal pain. It generally lasts less than 24 hours.

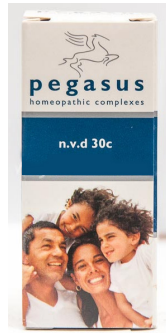

Chronic diarrhoea may indicate underlying food intolerances. If diarrhoea lasts longer than a few days or there is blood in the stool then medical attention is recommended.

Protocol:

Anti-microbial & astringent herb + Probiotic + Electrolytes

Choose from these products:

- Pro-biotic: Reuterina Acute or Metagenics UltraFlora Acute Care
- WW Goldenseal tincture
- Releaf Uzara
- Pegasus n.v.d
- Tissue Salts: #8 (anti-spasmodic), #9 & #11 (watery stools)

Add on:

- Vogel Molkosan as prebiotic
- Vitamin C helps to get rid of toxins
- Activated Charcoal tablets or powder to absorb toxins in case of food poisoning
- Lavender essential oil when diarrhoea is due to nervousness
- If due to a viral tummy bug use anti-virals such as ginger, Vit C, zinc, garlic and Goldenseal
- Antispasmodic herbs such as peppermint or chamomile

Dietary & lifestyle advice:

- Carrot Juice is soothing and calming to the digestive system
- Eat well cooked oats and brown rice with grated apple or banana
- Avoid foods or food combinations that can cause fermentation in the digestive system
- May want to reduce eating until diarrhoea has passed
- Make sure to stay hydrated and replace electrolytes with coconut water
- Slowly add fibre and fermented foods to balance healthy probiotic levels

HEARTBURN (GASTROESOPHAGEAL REFLUX DISEASE)

Heartburn is caused by stomach acid backing up into the oesophagus causing discomfort and pain.

Symptoms are usually a burning sensation in the stomach or chest, and can be accompanied by belching and a sour/acidic taste in the throat. This is now referred to as GERD rather than heartburn or indigestion.

Stress and low levels of stomach acid inhibit digestion and are major causes of acid reflux. Many people with acid reflux are under the misconception that they are OVER producing stomach acid, but more often they are not producing ENOUGH stomach acid.

Choose from these products:

- Siberian Pine Nut oil to protect, repair, and strengthen the stomach and gastric lining
- WW Vitamin B complex
- Himalaya Himcocid
- Phyto-Force Slippery Elm or Flora Force Slippery Elm Tablets
- Aloe Vera juice
- Tissue Salts #5 (digestive) & #10 (antacid)
- A. Vogel Molkosan
- A. Vogel Multiforce Powder

Dietary & lifestyle advice:

- Consume vitamin B rich foods such as almonds, whole grains, beans, spinach, kale and animal protein
- Avoid foods that may trigger: alcohol, caffeine, chocolate, citrus fruits, fatty or fried foods and spicy foods
- Drink a glass of water when heartburn is experienced
- Drink freshly pressed celery juice every day to assist body in making more stomach acid
- Eat smaller meals and don't eat three hours before bedtime
- Avoid stressful situations as much as possible as it affects the digestive system. Stress levels may be decreased by relaxation techniques and yoga
- Antacids can contain aluminium so are best avoided
- Certain drugs can suppress stomach acid, heartburn may be a side effect due to medication

NB: If pain persists and starts to travel down left arm, feel weak, dizzy or have shortness of breath seek medical attention. Early symptoms of a heart attack can be similar to indigestion or heartburn.

HAEMORRHOIDS

Haemorrhoids are swollen veins around the anus, they can either be within the anus or protrude outside the anus. They are also known as piles. Haemorrhoids often occur when there is straining when passing stools, usually due to constipation. They are very common during pregnancy.

Protocol:

Improve vein elasticity + curb inflammation + sort out constipation + support liver

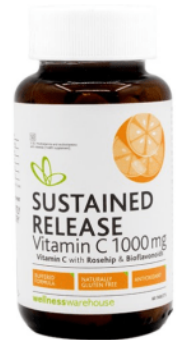

Important ingredients:

- Rutin, Quercetin or Resveratrol to support vein health
- Vitamin C for healing and inflammation

Choose from these products:

Internal:

- Himalaya Pilex
- Himalaya Liv 52
- Tibb Piloherb
- WW vitamin C
- WW Milk thistle

Externally:

- Anusol suppository
- Aloe Vera gel applied to the anus
- Cypress essential oil added to the bath or in a base oil and applied to the anus
- Himalaya Pilex ointment
- Boiron Homeoplasmine ointment

Add on:

- Soluble fibre: psyllium husks, oat bran, chia seeds and linseeds
- Metagenics MetaFiber powder
- Good Health Multi Fibre capsules

Dietary & lifestyle advice:

- Ensure diet is rich in fibre, both soluble and insoluble
- Drink enough water
- Add flaxseed oil or Aloe vera juice into the diet to help soften stools

IBS (IRRITABLE BOWEL SYNDROME) AND IBD (INFLAMMATORY BOWEL DISEASE)

IBS is often referred to as spastic colon and is considered to be a non-inflammatory condition. It isn't classified as a true disease but rather as a functional disorder. Symptoms include abdominal pain and spasms, bloating, flatulence, diarrhoea (loose stools) and/or constipation, usually alternating.

There is no single cause of IBS - it can be due to food intolerances, stress, hormone changes and lifestyle factors. No one approach seems to work, customers need to find what works for them and may benefit from working with a practitioner.

Inflammatory bowel disease (IBD) is a broad term that refers to chronic swelling (inflammation) of the intestines. Two types are Crohn's disease and ulcerative colitis.

Symptoms may include typical IBS symptoms plus extreme fatigue, intestinal scarring, joint pain, malnutrition, rectal bleeding, weight loss and of course inflammation.

Protocol:

Heal intestinal lining + alleviate spasms + support digestion + curb inflammation

Important ingredients:

- Heal the gut: L-glutamine, green powders, slippery elm, aloe vera and probiotics
- Manage spasms: ginger or peppermint
- Support digestion: enzymes
- Curb inflammation: curcumin, vitamin C or omega 3 oil

Choose from these products:

- Spasmopep
- Amipro Colon Ecology
- Flordis Iberogast
- Neogenesis IBS relief
- Metagenics Glutagenics
- Coloperm
- Vibrant Health Green Vibrance
- Siberian pine nut oil
- Metagenics UltraInflamX Plus 360

Add on:

- Bone broth or Aloe Vera Juice to heal the digestive tract
- Soluble fibre: psyllium husks, oat bran, chia seeds and linseeds
- Peppermint and Ginger essential oils, use in carrier oil and massage into the abdomen

Dietary & lifestyle advice:

- Try eliminating foods that may be causing the symptoms e.g. wheat, gluten, corn, dairy, coffee, foods from the cabbage family or legumes
- Slowly add fibre and fermented foods and drinks to the diet
- Fresh or powdered ginger made into a tea
- Reduce stress levels by doing moderate exercise and deep breathing

INDIGESTION (DYSPEPSIA)

Indigestion symptoms can include abdominal pain, belching, flatulence, nausea, diarrhoea or constipation. Usually a feeling of fullness is experienced and can be accompanied by heartburn. Can be due to overeating or may be due to low stomach acid.

Products:

- Digestive enzymes with HCL to increase stomach acid
- Schweden Bitters
- Himalaya Gasex
- Iberogast
- Probiotics
- A. Vogel Molkosan

Dietary & lifestyle advice:

- Moderate the size of meals, smaller lighter meals may be needed
- Food combinations or certain foods may exacerbate the indigestion
- Chew food well and eat in a relaxed manner
- Include pawpaw and pineapple in the diet
- Antacids may make things worse as they reduce already low hydrochloric acid
- Avoid drinking liquids with meals as it can dilute digestive enzymes
- A light walk and deep breathing may help the digestive process and reduce indigestion
- Don't eat too close to bed time
- Advise on how to use HCL properly - no more than 3 tablets per day unless under proper supervision, decrease dose if warm sensation is experienced in stomach

LOW STOMACH ACID (HYPOCHLORHYDRIA)

We need stomach acid (HCL or hydrochloric acid) to break down our food, especially proteins, so low levels of acid can affect vitamin and mineral absorption (especially Vitamin B12) and may lead to overgrowth of harmful bacteria, yeast or parasites in the stomach or small intestine.

Many people associate gastric distress with an excess of stomach acid, but low stomach acid is more likely to be the surprising cause behind many digestive issues. As we age stomach acid levels tend to drop. Often a side effect of many medications is low stomach acid.

Taking antacids for digestive discomfort can only make the problem worse as it lowers the already low HCL. Avoid taking alkaline powder long term for the same reason. Recommend products with Betaine HCL (to supplement stomach acid) or pepsin (enzyme to break down protein).

Protocol:

Offer suggestions for short term solution to assist with digestion, especially of proteins (Enzymes + Betaine HCl) and long term solution to assist body to make stomach acid (Bitters + B complex + Zinc + dietary recommendations).

Choose from these products:

- Metagenics SpectraZyme Metagest
- Solgar Digestive Enzymes
- Solgar Betaine Hydrochloride with pepsin
- WW Vitamin B complex
- WW Digestive Enzymes
- WW Zinc

Add on:

- Drink Apple Cider Vinegar with a little water before each meal to supplement stomach acid
- Use Homeoforce Schweden Bitter (Swedish Bitters) to aid digestion

Dietary & lifestyle advice:

- Add fermented foods to the diet
- Reduce stress levels by doing moderate exercise and deep breathing
- Chew food thoroughly and eat smaller meals
- Try food combining to help ease digestion
- Don't drink liquid with meals which will reduce stomach acid further
- Consume Manuka honey for its antimicrobial and healing properties
- Do not use antacids
- Drink freshly pressed celery juice every day to assist body in making stomach acid
- Increase bitter foods in the diet to stimulate natural secretion of enzymes and stomach acid
Recommend bitter salad greens and aromatic and bitter herbs.
- Consume full spectrum salts such as Himalayan salt, and increase whole fruit, vegetable and leafy greens in the diet to supply the sodium chloride and potassium needed to make stomach acid

NAUSEA

Nausea is usually a symptom of an underlying problem. It may be due to a stomach bug or food poisoning. Nausea can be a symptom of indigestion or overindulgence and it can also be a common symptom during the first trimester of pregnancy.

Choose from these products:

- Coyne Gingerol
- Pegasus v.m.t or n.v.d
- Tissue Salt #4 for nausea
- Tissue Salt #5 or 11 for overindulgence
- Heel Nux Vomica Homaccord when related to overindulgence or indigestion
- Homeoforce Schweden Bitter (Swedish Bitters) when related to indigestion or overindulgence

Add on:

- Gingerbon ginger sweets
- WW Ginger and Lemongrass tea
- Peppermint or Ginger essential oil
- place on tissue and sniff for morning or travel sickness

RESTORING OVER ALL DIGESTIVE WELL-BEING

The Four R Program for gastrointestinal restoration is a 12 week management plan that implements the following steps:

Remove: Allergens (gluten, grains, dairy), pathogens (bacteria, viruses, yeasts and parasites), environmental toxins, toxic metals such as mercury, life and other stressors

Replace: Ensure sufficiency of digestive enzymes and proper stomach acid. The best “test” is whether the person can properly digest a normal meal without complaints of bloating, gas formation, or reflux

Re-inoculate: Introduce probiotics and prebiotics in escalating doses over a two week period to allow the intestinal tract to adjust.

Repair: Reduce inflammation and heal and repair damaged intestinal lining with nutrients and herbs after the initial two week re-inoculate period.

Nutrients: L-glutamine (6-10 grams per day), pantothenic acid (500-1000 mg per day), zinc citrate (10 mg per day), omega 3 EPA/fish oil (1-3 grams per day), vitamin E as mixed tocopherols (400 mg per day), and the amino acid glycine (6-10 grams per day).

Herbs and spices: Ginger, bromelain, peppermint, aloe vera, turmeric, slippery elm, liquorice, bitter and aromatic herbs

Try the following products to restore general digestive well-being:

- Vibrant Health Green Vibrance
- Metagenics Glutagenics
- Coloperm
- Remedy Greens Super Celery Digestion

FEMALE HEALTH

PMS (PREMENSTRUAL SYNDROME)

PMS affects women 1-2 weeks before their period and also during menstruation. Symptoms can include bloating, acne, anxiety, breast swelling and tenderness, cramps, mood swings, headaches, fatigue and water retention. The underlying cause of PMS is either hormonal imbalances between estrogen and progesterone or a sensitivity to fluctuating hormones.

Phytoestrogens (plant estrogens) are substances that occur naturally in plants. They have a similar chemical structure to our own body's estrogen and are able to bind to the same receptors that our natural estrogen does, protecting us from harmful xeno-estrogens from our environment.

Different types of phytoestrogen include:

- Isoflavones (found in soy and other legumes such as chickpeas, mung beans and alfalfa)
- Coumestans (found in alfalfa and clover sprouts, and sprouted legumes such as mung beans and soy sprouts)
- Lignans (found in linseed/flaxseed, grains and vegetables)

Protocol:

Omega 3 + GLA + Magnesium & B6 + Agnus castus + estrogen metabolism support

Important ingredients:

- Regulation of moon cycle: Agnus castus (chasteberry)
- Estrogen metabolism: DIM, hops, fenugreek, cruciferous vegetables (sulforaphanes), green tea, phyto estrogens
- Liver support: Milkthistle, dandelion, artichoke

Choose from these products:

Estrogen metabolism:

- Metagenics Meta I3C
- Metagenics EstroFactors
- Future Health Hormone Assist

Menstrual regulation:

- Metagenics Chasteberry Plus
- Flordis Premular (Agnus castus)
- Sfera Agnus castus
- Himalaya Evecare

Dietary & lifestyle advice:

- Balance blood sugar levels to balance hormones
- Eat a healthy diet avoiding processed foods, junk food, caffeine, alcohol and sugar
- Keep diet light and full of vegetables, fruit and whole grains
- Ensure protein is coming from legumes, nuts, seeds, chicken and fish
- Include healthy fats such as fatty fish, olive oil, avo, nuts and seeds
- Raw cacao rich in magnesium is a healthier option for chocolate cravings
- Include enough fibre in the diet to help get rid of excess hormones
- Exercise is very important and managing stress is key
- Support the liver (where hormones are processed) with Milk Thistle

MENOPAUSE

The menopause is not an illness or disease - it is a natural progression of life. The ovaries take many years to slowly reduce the production of the hormones estrogen, progesterone and testosterone.

Perimenopause is the period when the body is preparing for menopause, periods may become irregular and symptoms begin to appear as hormone levels decrease. Symptoms include: hot flushes, night sweats, vaginal dryness, mood swings, low libido, osteoporosis, changes to skin and hair, lack of energy, insomnia, joint pains, weight gain, headaches and bloating.

Because estrogen is such an important hormone the adrenals carry on producing it after the ovaries stop their production. Estrogen is also stored in fat cells.

Protocol:

Healthy fats + menopausal regulator + estrogen metabolism support

Important ingredients:

- Menopausal regulators: Black cohosh, False rhubarb or Pueraria mirifica for hot flashes, vaginal dryness, irritability and irregular periods
- Estrogen metabolism: DIM, fenugreek, cruciferous vegetables (sulforaphanes), green tea, phyto estrogens such as red clover, sage, hops, liquorice, schisandra

Choose from these products:

Menopausal regulators:

- Solgar Botanical Female Complex
- Metagenics Black Cohosh
- Flordis Femular (Black cohosh)
- Solgar PM Phytogen Complex (Pueraria mirifica)
- Metagenics Estrovera (False rhubarb)
- A. Vogel Menopause Formula (Homeopathic)
- A. Vogel Hot Flushes and Night Sweats Remedy (Sage)
- Chinaherb Meno-well
- Himalaya Menosan

Estrogen metabolism:

- Metagenics Meta I3C
- Metagenics EstroFactors
- Future Health Hormone Assist
- NOW DIM 200

Add on:

Product to support bone health:

- Metagenics Ostra
- Solgar Ultimate Bone Support
- Good health Supercal
- WW Calcium Magnesium

Other symptoms:

- B complex to help cope with the stress of the changes
- Vitamin E to help reduce hot flushes and for vaginal dryness
- Vitamin C as an antioxidant and to help maintain collagen for skin and bones
- Omega 3 as anti-inflammatory and hormone balancer
- Rescue Remedy

Dietary & lifestyle advice:

- Balance blood sugar and reduce refined foods and sugar in the diet
- Avoid stimulants such as tea, coffee and alcohol
- Reduce dairy intake as well as red meat
- Eat fatty fish to get omega 3's
- Eat foods high in phytoestrogens eg. beans, lentils and flaxseeds
- Eat cruciferous vegetables to assist with estrogen metabolism (cabbage, cauliflower, broccoli, Brussels sprouts)
- Increase fibre intake to mop up excess estrogen and assist with elimination

SKIN, HAIR & NAILS

As women age their skin can change becoming drier and more lined as collagen is lost. Hair may thin out and the texture may change. The condition of the nails can also deteriorate. This can often be a sign of poor digestion and poor absorption of nutrients. Different disorders can show up on the nails. Hair loss and dry skin can also be due to low thyroid function which can decrease with age.

Protocol:

Collagen + vitamin C or MSM to synthesise + vitamin B complex + Omega 3

Choose from these products: Skin

- Good Health Imaglow
- Omega 3 fish oil
- Collagen e.g. Metagenics Collagenics or Good Health Imagalow
- Solgar Hair, Skin and Nails
- Tissue salts #7 and #12

- Antioxidants Formula including Vitamin A, C and E
- Pycnogenol and grapeseed extract
- MSM
- Kelp

Choose from these products: Hair

- Solgar Biotin 5mg for thinning hair
- B complex if hair loss is due to stress
- Solgar Oceanic Silica or horsetail
- Tissue salts #3, #7 and #12
- Vitamin C and Vitamin E
- Omega 3 fish oil
- MSM

Choose from these products: Nails

- Silica or Horsetail
- Vitamin B complex including B12
- Vitamins A and C
- Omega 3 & 6 oils
- Zinc with copper eg Viridian Zinc complex
- Tissue salts #7 and #12

Dietary & lifestyle advice:

- Consume Bone broth or Aloe Vera juice
- Good quality protein is important
- Eat foods rich in sulphur: broccoli, onions, leeks and garlic
- Eat foods rich in silica: sea vegetables, dark leafy greens and radish
- Avoid using harsh products on the hair and skin use natural skin and hair products
- Avoid using harsh chemical dyes on the hair
- Avoid using nail polish and use a natural balm on nails and cuticles
- Avoid strong dishwashing detergents use natural products that won't damage nail

WATER RETENTION - OEDEMA

This is when fluid accumulates in the spaces between the soft tissue and cells. It most commonly occurs around legs and ankles and can also happen in the abdomen and hands. The tissue under the skin becomes swollen and puffy. There may be a serious underlying cause such as heart or kidney failure but it can also occur as a symptom of PMS or allergies. It seems to occur more frequently in summer and often when travelling, women seem more prone to it.

Diuretics are a class of drugs that promote diuresis, or the increased production of urine. Also sometimes called water pills, these medications are used to remove excess water from the body and treat conditions like heart failure, liver disease and high blood pressure.

Diuretic drugs can be accompanied by side effects such as high blood sugar, headaches and dizziness, causing many people to turn to natural diuretics as an alternative treatment method.

These powerful herbs, supplements and foods can mimic the effects of diuretics to increase urine volume and flush out extra fluids. Besides preventing fluid buildup, many also supply a host of health benefits as well as a range of vitamins, minerals and antioxidants to optimize other aspects of health as well.

Protocol:

Formulated product

Important ingredients:

- Dandelion, buchu, goldenrod, juniper, nettle, Uva ursi (bearberry): water regulators and diuretics

Choose from these products:

- Chinaherb Expel Water Retention
- Solgar Uva ursi and Juniper Formula
- Nativa Water Flow Complex
- Natura Corp (Homeopathic)

Add on:

- Essential oils of Cypress, Juniper and Grapefruit
- Tissue salt #11: regulator of body fluid

Dietary and lifestyle advice:

- Reduce salt intake in the diet
- Make sure there is a good intake of minerals from a varied diet
- Avoid foods that are known to contribute to water retention: soy sauce, olives, salted foods, smoked foods, ready meals (high in salt)
- Ensure adequate water intake

Lymphedema is a more serious condition where the lymph does not drain properly and can be on-going with long term effects.

YEAST INFECTIONS (CANDIDA ALBICANS)

Yeast infections are fungal infections, the most commonly occurring one is Candida Albicans and it is naturally present in the gut and vagina. It is normally kept in check by the microbiome. If there is an overgrowth then it may start to cause problems. It can also be found in the mouth, nose, finger and toe nails. Candida infection can present as nappy rash, vaginitis and thrush.

Symptoms may include: constipation, diarrhoea, abdominal pain, headaches, bad breath, poor memory, mood swings, congestion, burning tongue and bladder infections. Symptoms are made worse by consuming certain foods and from damp/mouldy places.

It can be caused by taking antibiotics, undergoing chemotherapy, hormonal changes, taking hormones e.g. the pill, becoming stressed or run down and a compromised immune system. Vaginal thrush may be sexually transmitted, males seldom display symptoms. Treat both partners.

Protocol:

Anti-fungal herb or formula + topical product + dietary recommendations

Important ingredients:

- Anti-fungal plants: garlic, oregano, pau d'arco, thyme, grapefruit seed extract
- Caprylic acid: anti-fungal from coconut

Choose from these products:

Internal:

- Metagenics CandiBactin AR and BR
- Flora Force Candida Formula
- NOW Candida Support
- Kolorex Advanced Candida Care
- Solgar Wild Oregano oil
- Viridian Grapefruit seed extract
- Solgar Garlic oil or powder
- Phyto-Force Pau D'Arco
- Bettamed Cleanse & Recover caps
- Solgar Maximized Caprylic Acid

Topical products:

- Bettamed Care cream & Oxygen spray
- Nature Fresh Intimate Cleanser with tea tree

Add on:

- Probiotics, especially containing Lactobacillus Rhamnosus: Metagenics UltraFlora Women's
- Coconut oil naturally contains caprylic acid which helps reduce candida

Dietary and lifestyle advice:

- Avoid sugar in all its forms, as well as alcohol
- Eat a diet low in refined carbohydrates and gluten
- Avoid products with yeast added to them
- Limit the amount of fruit especially dried fruit
- Eat plain yoghurt or kefir
- Wear cotton underwear and only use cotton panty liners
- Douche with Bettamed Oxygen spray
- Use topical products for at least 14 days

FIRST AID

BITES & STINGS

Mosquitoes, bed bugs, lice and fleas are the most common biting insects in South African households. Bee and wasp stings are also fairly common in summer and can be very serious if the person is allergic. They should receive immediate emergency care.

Unless you're allergic, the worst part of insect bites is generally the skin itching, pain, irritation and swelling they can cause. The site of the bite or sting can become infected if scratched and left untreated.

Repellents are substances that keep insects, such as lice and mosquitos away.

Choose from these products:

- Pegasus Sting
- Honeyguide Propolis tincture
- Disinfectant and treatment: Natura Calendula Plus ointment, Bettamed Oxygen Spray & Care Cream, BuchuLife First Aid Gel, Similisan Insect Bite Roll On, Natura Injura drops, Curaloe Soothing Aloe Vera Gel, Silverlab colloidal silver products
- Repellents: Badger Anti Bug Balm, Simply Bee Insect Repellent, Pure Beginnings Natural Insect Repellent, Soil Citronella Essential Oil, proGuard Lice Shampoo & Conditioner
- Essential oils for bites and stings: Lavender, Tea Tree, Chamomile

Add on:

- Rescue Remedy
- Activated charcoal topically in a paste to draw out toxins
- For allergic reactions: Quercetin, Vitamin B5 (Pantothenic acid), Pegasus Sting and Pegasus Histamine to support (not replace) emergency treatment

Dietary and lifestyle advice:

- Persons who are allergic to the sting of certain insects (eg. bees, wasps, etc.) must also comply with the additional therapeutic measures as prescribed by their physician
- Consult your physician if the symptoms worsen or if there is no improvement within 2 days, and in all cases of stings and bites around the head (especially in the mouth)
- Plant herbs such as citronella, lemongrass, peppermint and lemon verbena around your house to repel mosquitoes and flies

BRUISES

A bruise is a dark discolouration caused by blood seeping under the skin after small blood vessels near the surface of the skin have been broken. As the bruise heals, the body breaks this blood down and reabsorbs it, turning the area/mark a typical greenish-blue.

Bruises are more common in people who are on treatment to prevent blood clots (warferin, coumarin, heparin or aspirin).

Choose from these products:

Internal:

- Natura Arnica D6 tablets
- Heel Traumeel tablets
- Natura Injura drops
- Pegasus injury 6c

Topical:

- Natura Arnica ointment or gel (not on broken skin)
- Heel Traumeel ointment or gel

Add on:

- Vitamin C

BURNS

First-degree burns cause minimal skin damage and are usually treated with home care. They are also called “superficial burns” because they only affect the outermost layer of the skin. Signs of a first-degree burn include redness, minor inflammation, swelling, pain and dry, peeling skin as the burn heals.

Since this burn affect the top layer of the skin, the signs and symptoms disapear once the skin cells shed. First-degree burns usually heal within 7-10 days without scarring.

Choose from these products:

Internal:

- Pegasus sting for the pain
- Vitamin A, C, E, Zinc, Omega 3, L-Glutamine and collagen for tissue repair and curbing inflammation

Topical:

- Silverlab Colloidal Silver Spray and Cream
- BuchuLife First Aid gel
- Down to Earth African Potato Cream
- Boiron Homeoplasmine
- Bettamed Care Cream
- Aloe Vera lotion or gel
- Soil Lavender essential oil

Add on:

- Manuka honey topically

Dietary and lifestyle advice:

- Recommend that customers see their doctor if the burn affects a large area of the skin, is larger than 7,5cm and if it's on their face or a major joint (knee, ankle, foot, spine, shoulder, elbow or forearm). Healing time may be quicker the sooner you treat the burn
- Consume quality sources of clean proteins to aid tissue growth and repair

FIRST AID HOME KIT

The **Pegasus Blue Box** is an essential portable kit containing homeopathic treatments for the whole family. It's ideal for the home, and includes 28 remedies covering most common ailments, from insect bites and injuries to colds and flu, sinusitis, diarrhoea, vomiting and more. It includes a comprehensive how-to-guide and individual refills are available for each of the remedies.

Add on:

- Natural and chemical free sunscreen
- Colloidal Silver spray to cool down burns and sunburn
- BuchuLife First Aid gel for burns, sunburn, cuts and abrasions
- Bettamed Oxygen spray to clean wounds
- Natura Arnica Gel for bumps, bruises and sprains
- Rescue Remedy or Pegasus t.r.s 200c for shock and stress
- Pegasus n.v.d 30c (nausea, vomiting, diarrhoea)
- Pegasus teething, pain and fever 30c
- Pegasus injury 6c
- Vitamin C
- Echinacea
- Ginger tea
- Lavender essential oil
- Tea tree essential oil
- Plasters
- Cotton wool
- Scissors
- Bandages
- Thermometer

SHOCK

There are different kinds of shock including anaphylactic shock from an allergic reaction, cardiogenic shock from a heart deficiency, hypovolemic shock from bleeding or dehydration, neurogenic shock from severe emotional disturbance, and septic shock from infections in your blood.

Severe hypotension (low blood pressure) can also result from or cause shock, where the blood pressure drops severely and doesn't come back up. You should get emergency help if you have any of the following signs and symptoms of shock:

Symptoms:

- Confusion, irritability or anxiety
- Cold and clammy, pale skin
- Weak but racing pulse
- Fast, shallow breathing
- Enlarged pupils
- Fatigue, weakness or sleepiness
- Nausea or vomiting
- Urine output is diminished

Products:

- Pegasus t.r.s 200c (trauma, rescue, shock)
- Rescue Remedy

Emergency Measures:

- Lay the person down and elevate the legs and feet slightly, unless you think this may cause pain or further injury
- Keep the person still and don't move him/her unless necessary
- Begin CPR if the person shows no sign of life, such as breathing, coughing or movement
- Loosen tight clothing and, if needed, cover the person with a blanket to prevent chilling
- Don't let the person eat or drink anything
- If you suspect that the person is having an allergic reaction, and you have access to an epinephrine autoinjector, use it according to its instructions
- If the person is bleeding, hold pressure over the bleeding area, using a towel or sheet
- If the person vomits or begins bleeding from the mouth, turn him/her onto a side to prevent choking, unless you suspect a spinal injury

STRAINS & SPRAINS

A sprain is a stretched or torn ligament. Ligaments are tissues that connect bones to a joint. Falling, twisting or getting hit can all cause a sprain. Ankle and wrist sprains are common.

Symptoms include pain, swelling, bruising and being unable to move the joint.

Choose from these products:

Internal:

- Natura Arnica D6 tablets
- Heel Traumeel tablets
- Natura Injura drops
- Pegasus injury 6c pillules
- Himalaya Rumalaya tablets
- Tibb Rumaflam tablets

Topical:

- Natura Arnica ointment or gel (not on broken skin)
- Heel Traumeel ointment or gel
- Real MSM gel

Add on:

- Vitamin C, E, Zinc, Omega 3, L-Glutamine and collagen for tissue repair
- MSM tablets or powder, curcumin for pain and inflammation

Dietary and lifestyle advice:

- Rest and ice the sprained body part. Elevate by placing it above the level of your chest, ideally for about the first 48 hours.

SUNBURN

While careful sun exposure can be very beneficial, sunburn can be very harmful and should be avoided. Always recommend a non-toxic sun cream to avoid burning in the first place.

Sunburn is a type of burn caused by overexposure to the UV (ultraviolet) rays of the sun, with the exposure required to burn varying greatly between individuals. Sunburn starts with an initial redness of the skin, then is followed by varying degrees of pain, and may cause blistering.

Choose from these products:

Internally:

- Pegasus sting for the pain
- Vitamin A, C, E, Zinc, Astaxanthin, Omega 3, L-Glutamine and Collagen for tissue repair and curbing inflammation

Topical:

- Silverlab Colloidal Silver Spray
- BuchuLife First Aid gel
- Down to Earth African Potato Cream
- Silverlab's Sport After Sun Liqui-gel
- Boiron Homeoplasmine
- Curaloe Aloe Vera Gel
- Jason Vitamin E oil

Add on:

- Soil Lavender or Chamomile essential oils to bathe in
- Apple Cider Vinegar to bathe in

Dietary and lifestyle advice:

- Try to stay out of the sun during the warmest hours of the day (11:00 to 15:00)
- Wear a hat and a long-sleeved shirt or bathing suit when out in the sun for long periods of time
- Only use natural sunscreen products without chemicals
- Stay hydrated by drinking water and cooling juices such as cucumber & mint

- Improve your sun tolerance by eating a healthy diet including the following supplements: vitamin D3 (2000 IU/day); vitamin C (2000 mg/day); Omega 3 and Astaxanthin (a highly potent antioxidant which research shows acts as an internal sunscreen for adults)

If you do get burnt:

- Do not take very hot baths or showers as it may worsen the sunburn
- Bathe in cool water and add soothing Apple Cider Vinegar, baking soda, lavender or chamomile essential oils or oatmeal

WOUNDS, CUTS & ABRASIONS

Minor wounds, cuts and abrasions can be cleaned by using oxygenated sprays, then healed by using antiseptic and healing ointments.

An abrasion is a wound caused by superficial damage to the skin, no deeper than the outer layer of the skin. Mild abrasions, also known as grazes or scrapes, do not scar or bleed profusely.

If a wound doesn't close easily, bleeding does not stop within 10 minutes, the wound is deep (more than 0.6cm), gaping or jagged-edged, stitches may be needed to promote healing, prevent infection and minimise scarring.

Choose from these products:

Internal:

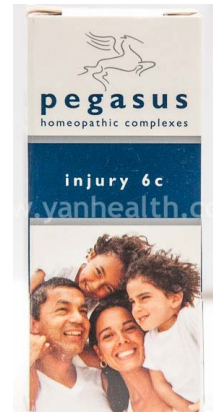

- Pegasus injury 6c
- Heel Traumeel

Topical:

- Bettamed Oxygen spray
- BuchuLife First Aid gel
- Silverlab Colloidal silver spray
- Natura Calendula Plus ointment
- Curaloe Relieving Aloe Vera Gel
- Pegasus Herbal Antiseptic Solution
- Vitaforce graze and wound powder

Dietary and lifestyle advice:

- Vitamin C, E, Zinc, Omega 3, L-Glutamine and collagen for tissue repair and curbing inflammation

IMMUNE SYSTEM

GENERAL IMMUNITY

Helping to maintain a good healthy immune system may assist with cold and flu prevention. It is also important when travelling to be aware of the added risk of illness and to be able to take certain supplements for prevention of illness.

Sometimes the immune system appears weak and taking supplements to strengthen the immune system can be of help.

When considering immune boosting products these should be taken for up to 3 months and then a break is needed before they are taken again. Normally they will be of benefit during winter.

Important nutrients:

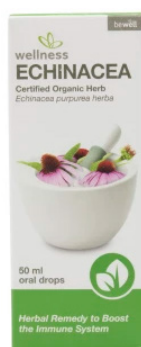

- Vitamin A, C, D
- Selenium and zinc

Important herbs:

- At the onset of illness: Echinacea, Elderberry
- Long term immune modulator: Astragalus, Holy basil (Tulsi) and medicinal mushrooms, sutherlandia

Choose from these products:

- Metagenics ImmuCore
- Metagenics Immune Active
- A. Vogel Echinaforce or WW Echinacea tincture
- Solgar Beta Glucans and Elderberry Complex
- Sfera Full Spectrum Mushroom Complex
- Good Health Viralex
- AllisOne Bioplasma
- Pegasus immune defence 6c
- Boiron Oscillococcinum
- Himalaya Septilin
- Tibb Septogard

Add on:

- Metagenics Ultraflora Immune booster as probiotic
- Remedy Greens Supersterol Immune as superfood complex
- Garlic and ginger

Dietary and lifestyle advice:

- Drink enough water
- Increase intake of fresh fruits and vegetables with whole grains
- Limit the intake of processed foods and foods containing sugar
- Adequate rest is important, as well as minimising stress
- Essential oils of Lemon and/or Ginger can be used in a foot bath or inhalations to boost the immune system

COLDS & FLU

These conditions are caused by a viral respiratory infection.

Common colds are upper respiratory tract infections with nasal congestion and sneezing. It can start with a sore throat or swollen tonsils. Colds clear up after 7-10 days. They may lead to bronchitis, sinusitis and ear infections.

Flu or Influenza is more serious, symptoms may include: body aches and pain, fever, headache and tiredness. It takes longer to clear up, up to a month. Bed rest and staying at home to stop spreading the infection is recommended.

Protocol:

Vitamin C + Zinc + Ginger + L-lysine

Important nutrients:

- Anti-viral, anti-oxidant, anti-inflammatory: vitamin C, selenium and zinc, L-lysine, quercetin and resveratrol

Important herbs:

- Anti-viral: Gigartina
- Anti-microbial: Andrographis, echinacea, elderberry, goldenseal, olive leaf

Choose from these products:

- Metagenics Essential Defense
- Vibrant Health Gigartina
- WW Cold & Flu drops
- Good Health Viralex Attack or Good Health Viralex Kids
- Solgar Olive Leaf
- Himalaya Septilin tablets or syrup
- Tibb Septogard tablets or syrup
- Boiron Oscillococcinum
- Pegasus cold & flu

Add on:

- Vitamin C 1000mg
- Zinc lozenges
- Eucalyptus essential oil used in inhalations for nasal congestion
- Heel Viburcol suppositories for high fever in young children
- If symptoms start with a sore throat: Viridian Elderberry spray or Propolis spray

Dietary and lifestyle advice:

- Remove mucus forming foods from the diet such as dairy and unripe bananas
- Reduce intake of sugar
- Drink tea with honey, lemon and ginger
- Sore throat gargle with salt water and tea tree essential oil
- Keep diet light with fresh fruits and vegetables, as well as fresh juices
- Homemade chicken soup or bone broth

**CONVALESCENCE**

When building up strength after illness consider the following options:

Choose from these products:

- Tissue Salt #2
- Bio-Strath
- Vibrant Health Green Vibrance
- Remedy Greens Supersterol Immune
- Bettamed Cleanse and Recover capsules
- Moducare

Dietary and lifestyle advice:

- Take it slow, rest and sleep enough
- Avoid electronics of all kinds
- Stay well hydrated with filtered water, herbal teas and coconut water
- Eat easily digestible, nutrient dense and fresh foods (soups, lightly steamed vegetables and fresh fruit)
- Bone broth - we need enough healthy proteins, glutamine and arginine to heal and build strength

COUGHS & BRONCHITIS

Coughs are usually a symptom of a cold or flu and is usually caused by a post nasal drip. It may develop into bronchitis which is an inflammation of the bronchial tubes caused by excess mucus, there may be coughing and a sore throat with pain in the chest or back. Acute bronchitis is caused by an infection and should clear up in a few weeks. In some cases bronchitis may lead to pneumonia.

Protocol:

Pelargonium + multi-nutrient formula + cough syrup

Important nutrients and medicines for respiratory health:

- Vitamin A: builds resistance to respiratory infections
- Vitamin C: prevents viral and bacterial infections
- Vitamin D: immune booster - take together with Vitamins A & C
- MSM: for all respiratory conditions including allergies and asthma
- Medicinal mushrooms: general respiratory health and immunity
- Pelargonium: mucolytic, anti-microbial, immune-modulating
- Quercetin: anti-viral, anti-inflammatory and for allergies
- NAC (N-acetylcysteine): thins mucous so that it can be expelled

Choose from these products:

- WW Pelargonium
- Tibb Kofcare
- Himalaya Koflet
- Boiron Stodal cough syrup
- Heel Nectadyn cough syrup
- Pegasus bronchial relief for dry coughs or Pegasus muco drainol for wet coughs

- Tissue salts #5 & #8 for dry coughs and #6 & #11 for tight coughs with mucus
- Essential oils of Frankincense, Cedar wood, Cypress, Myrrh, Eucalyptus and Lavender for inhalation or mix in a base oil and rub onto the chest

Dietary & Lifestyle advice:

- Spicy and pungent herbs help to thin mucus: horseradish, chillies, ginger, garlic and onions
- Avoid mucus forming foods such as dairy and sugar
- Physiotherapy may help to loosen up mucus in the bronchial tubes
- Use an air purifier or humidifier

FEVER

A fever is a body temperature that's higher than normal. While the average normal body temperature is 37¼C, a normal temperature range is between 36.4¼C and 37.5¼C. Most doctors consider a temperature above 38¼C as a sign of a fever.

A fever is the body's natural reaction to an acute viral or bacterial infection and is not necessarily considered a dangerous condition in itself. It's a sign that the body is defending itself against the infectious invader. Since viruses and bacteria do not survive as well in a body with an elevated temperature, fever is actually an ally in fighting infection. An elevated temperature also increases the production of infection-fighting white blood cells and even increases their speed of response and enhances their killing capacity.

Choose from these products:

- Pegasus teething, pain and fever 30c
- Heel Viburcol suppository
- Tissue Salts #4 and #9

Dietary and lifestyle advice:

- Replace lost fluid by drinking water with a little pinch of Himalayan salt, coconut water or herbal teas such as peppermint or chamomile
- Avoid eating and taking supplements until fever breaks
- Rest and let the fever run its course unless very high
- Melissa or Peppermint essential oil added to water and used to sponge bathe or onto wet face cloth placed on forehead

When to call the doctor:

- A baby 3 months old or younger has an elevated temperature (even a low temperature)
- If the sufferer is an infant under six months of age
- When the fever is accompanied by a stiff neck, confusion, lack of energy, difficulty in awakening or inconsolability
- When the sufferer has fever and shows signs of febrile seizures: muscles throughout the entire body stiffen, eyes may roll, the head may jerk, hands and/feet may tap and loss of bowel and urine control may occur
- Fever with frequent urination or blood in urine with fever
- Pain in one area of the abdomen with fever
- Severe headache and vomiting with fever
- Diarrhoea lasting more than 24 hours with fever

HAY FEVER

Also known as allergic rhinitis, hay fever is an allergy to the pollen of plants. It can affect the mucous membranes of the nose, as well as eyes and air passages. Symptoms include itchy red eyes, watery discharge from the nose, sneezing, irritability and fatigue. Symptoms are similar to a cold but the discharge is watery rather than thick mucus.

Important ingredients:

- Natural antihistamines: quercetin, stinging nettle, bromelain
- MSM: for all respiratory conditions and allergic reactions
- Vitamin C and Vitamin B complex (especially B5 as antihistamine)

Choose from these products:

- Solgar Quercetin Complex
- Future Health Quercetin Assist
- Boiron Coryzalia
- Pegasus hay fever and Pegasus histamine
- Tissue Salt #9 for streaming eyes and nose
- Tissue salts #5 & #9 for chronic hay fever
- Pegasus hay fever and Pegasus histamine
- Natura Mixed Allergen

**Add on:**

- Probiotics
- Air purifying machine with Beautiful Aromas hay fever drops or hay fever purifying spray

Dietary and lifestyle advice:

- Try to avoid the cause of the allergens especially on windy days
- Use an air purifier where you sleep to keep allergens out of the air
- Avoid processed, high sugar foods and dairy products
- Having yoghurt or a dairy kefir may assist unless suffering from an allergy to casein
- Eat magnesium rich foods, onions and garlic that contain quercetin and fresh pineapple rich in bromelain

INFECTIONS

BACTERIAL INFECTIONS

Illnesses caused by bacteria include: Strep throat, Urinary Tract Infections, Tuberculosis and Scarlet Fever. If left untreated bacterial infections can be very serious. If a viral infection is not treated quickly and effectively, a secondary bacterial infection such as ear, throat and lung infection might complicate healing. Treat with natural antibiotics and a good probiotic.

Because of the overuse of antibiotics in medicine and in our food chain, and because of overuse of antimicrobial products, microbes have become resistant to the effects of antibiotic medicines.

Plants that have antimicrobial actions still have an effect on microbes because they have co-evolved with microbes for millions of years.

Protocol:

Natural antibacterial + probiotic

Choose from these products:

- Vibrant Health Bacterial defense
- WW Goldenseal or Olive leaf tincture
- Solgar Wild Oregano oil or Garlic oil
- Tibb Septogard
- Himalaya Septilin

Add on:

- Probiotics
- Fever: Tissue salt #4 (every hour until the fever subsides), or Pegasus pain & fever, or Heel Viburcol Suppositories
- Tissue Salts #4, #5 and #7 (every 2 hours for all three stages of inflammation)

Dietary and lifestyle advice:

- Taking an antibiotic (drug) can reduce the good gut bacteria which is important for the immune system. If a course of antibiotics has been taken a probiotic should be recommended for at least 3 to 6 months, and fermented foods and drinks should be consumed every day after that. Do not take the anti-biotics and probiotics at the same time of day
- Bed rest is highly recommended
- Drink lots of fluids: room temperature water & herbal teas such as ginger
- Keep temperature constant by keeping the patient in bed
- Simple foods that digest easily such as chicken soup, lightly steamed veg and fruit
- Make chicken soup with garlic, ginger, coriander, parsley and spring onions

Some infections such as Meningitis, ear infection, bronchitis may be caused by bacteria or viruses.

Both viral and bacterial infections spread in similar ways:

- Coughing and sneezing
- Contact with infected people, especially through kissing, as well as touching eyes
- Contact with contaminated surfaces, food, and water
- Contact with infected creatures, including pets, livestock and insects like fleas and ticks

VIRAL INFECTIONS

Many illnesses and conditions are caused by viruses: the cold, the flu, cold sores, herpes, childhood illnesses such as German Measles, Chickenpox, Measles, Mumps, Pink Eye and Croup as well as Shingles in adults. Typical symptoms will include fever and a rash in many cases.

These are all contagious diseases and spread easily. It's very important to look after a patient with a viral infection as many secondary bacterial infections can result from not managing a viral infection well.

Antibiotics are not effective against viruses, and health organisations now recommend against using antibiotics unless there is clear evidence of a bacterial infection.

Most viral infections tend to resolve on their own without treatment, so any treatment generally is aimed at providing relief from symptoms like pain, fever and cough, as well as supporting the immune system.

Protocol:

Vitamin C + Zinc + Ginger + L-lysine

Important nutrients:

- Anti-viral, anti-oxidant, anti-inflammatory: vitamin C, selenium and zinc
- Anti-viral: L-lysine
- Immune support and anti-inflammatory: vitamin D

Important herbs:

- Anti-viral: Echinacea, elderberry, ginkgo
- Anti-microbial: Goldenseal, olive leaf

Choose from these products:

- Metagenics Essential Defense
- WW Goldenseal or Echinacea tincture
- Himalaya Septilin
- Tibb Septogard
- Pegasus Anti Virabac

Add on:

- Fever: Tissue salt #4 (every hour until the fever subsides), or Pegasus pain & fever, or Heel Viburcol suppositories
- Tissue Salts #4, #5 and #7 (every 2 hours for all three stages of inflammation)

Dietary and lifestyle advice:

- Bed rest is highly recommended
- Drink lots of fluids: room temperature water and herbal teas such as ginger
- Keep temperature constant by keeping the patient in bed
- Simple foods that digest easily such as chicken soup, lightly steamed veg and fruit
- Make chicken soup with garlic, ginger, coriander, parsley and spring onions

SINUSITIS

Sinusitis is an inflammation of the nasal sinuses located above the eyes, in the cheekbones and nose.

The sinuses are the first line of defence against infections and can become blocked with mucus causing pain. There may also be a fever, cough, headache or earache. If the sinuses remain clogged up for some time it can lead to an infection. Sinusitis can become chronic with growths in the sinuses and may be linked to allergies such as environmental or food related irritants.

Protocol:

Formulated product + probiotic + nasal spray

Important ingredients:

- Antihistamines and anti-inflammatories: quercetin, stinging nettle, bromelain
- Mucous thinner: NAC
- Respiratory support nutrients: vitamin C

Choose from these products:

- Metagenics Sinuplex
- Chinaherb Relieve Nasal Passage
- Pegasus sinus 30c and muco drainol 30c
- Heel Euphorbium spray
- Tissue salts #5 and #9
- Tibb Sinugraine

Add on:

- Eucalyptus essential oil for steam inhalations
- Colloidal Silver nasal spray
- Similisan Hayfever Relief Nasal spray
- Similisan Allergy Eye Relief drops

Dietary and lifestyle advice:

- Eat more raw fruit and vegetables including fresh vegetable juices
- Include in the diet fresh pineapple which is rich in bromelain
- Add cayenne, garlic, onion, ginger, and horseradish (including wasabi)
- Use a neti pot to clean the sinus cavity
- Better to get rid of excess mucus through sniffing and expel through mouth. Blowing the nose causes more mucus to accumulate in the sinuses

SORE THROAT & TONSILITIS

A sore throat can usually be the first sign of a cold and is caused by a viral infection. Bacterial infections like streptococcus can also cause a sore throat. Sore throats may furthermore be caused by an irritant or by overuse.

Tonsillitis is the inflammation of the tonsils (lymphatic tissue) caused by a viral or bacterial infection. Symptoms include sore throat and difficulty swallowing, tonsils can appear red and swollen and lymph glands are enlarged.

Choose from these products:

- WW Goldenseal or Echinacea tincture
- A. Vogel Sore Throat Spray
- Viridian Elderberry Throat Spray
- Heel Vinceel
- Herbaforce Tonzolyt
- Natura Tonsilla
- Tissue Salts #3, #4 and #7

Add on:

- Solgar Flavo-Zinc lozenges
- A. Vogel Echinacea lozenges
- Tibb Septogard lozenges
- Himalaya Koflet lozenges
- Essential oils of lavender, tea tree, thyme and lemon used as inhalations
- Slippery elm tea to soothe the throat
- Coconut oil for oil pulling relieves pain and inflammation

Dietary and lifestyle advice:

- Gargle with 1/2 teaspoon of sea salt in 1 cup of warm water, can add 2 drops of tea tree essential oil
- Sip ginger tea with raw honey and lemon to help soothe a sore throat
- Eat a diet high in fruit and vegetables, vegetable soups can be light and nourishing

TRAVEL IMMUNITY

When travelling consider taking along some of the following products:

- Anti-microbials: WW Goldenseal
- Anti-fungals: Viridian Grapefruit Seed Extract
- Anti-parasitics: Aim Para 90, Flora force parasite & worms
- Probiotics: Metagenics UltraFlora Acute Care or Good Health Immuno-biotic
- Homeopathics: Pegasus n.v.d 30c (nausea, vomiting, diarrhoea)
- General tonic: AllisOne Bioplasma
- Essential oils: Tea tree

INFLAMMATION

Short term inflammation is an appropriate response of the body to protect against infection from wounds and pathogens and is part of the natural healing process. The body localises infection by increasing blood supply to the affected area which is what causes the typical redness and swelling.

Chronic inflammation that persists for longer and is systemic (spread throughout the body) may cause oxidative stress which contributes to chronic conditions such as heart disease, cancer, diabetes, auto-immune diseases and cognitive decline.

Externally, the typical symptoms of inflammation include redness, swelling, pain and heat on the skin, as well as immobility.

Chronic inflammation may be caused by a diet high in simple sugars, refined carbohydrates and inflammatory fats; long term stress; oxidative damage caused by lifestyle choices such as smoking, alcohol and drugs; food allergies and intolerances and even low grade underlying bacterial and viral infections.

Internal inflammation might present as pain and fatigue but also:

- Post nasal drip, sinusitis, recurring ear, nose and throat or chest infections
- Memory loss, dementia, Alzheimers, Parkinson's disease
- Joint deterioration, arthritis, gout
- Heart and circulatory illnesses
- Auto-immune diseases and allergies

The important body systems to support are the gut and the liver. When these systems become inflamed it affects all other systems in the body. Equally important is to make sure blood sugar balance is attended to, as imbalances lead to wide spread inflammation.

Important anti-inflammatory ingredients:

- Best acute anti-inflammatory: Bromelain (take on an empty stomach for this effect) for sprains, strains, bruising, muscle/sports injuries, post-operative injuries, sinusitis, bronchitis
- General anti-inflammatories: Ashwagandha, curcumin, ginger, green tea, MSM, magnesium, Omega 3, vitamin C

Anti-inflammatories for specific systems or concerns:

- Adrenals: Curcumin, liquorice, vit C
- Allergies: Liquorice, MSM, nettle, quercetin, vit C
- Blood sugar regulation: ALA, cinnamon
- Brain: CoQ10, Gotu Kola, Omega 3, vit D
- Circulation: CoQ10, grapeseed, horse chestnut, pycnogenol
- Ear, nose & throat: Echinacea, elderberry
- Gut: Curcumin, ginger, liquorice, MSM, zinc
- Heart: ALA, CoQ10, hawthorn, resveratrol

- Joints: Boswellia (Frankincense topically), curcumin, ginger, Omega 3
- Liver: Black seed oil, curcumin, milk thistle, MSM, pycnogenol, selenium,
- Lungs: Black seed oil, boswellia, liquorice, MSM, pycnogenol, vit D
- Prostate: Saw Palmetto
- Sinuses: Boswellia, bromelain
- Skin: MSM, vit C

Anti-inflammatory diet:

- Avoid inflammatory foods such as simple sugars, refined carbs and white flour products; trans fats; industrial omega 6 oils and products that contain them or foods fried in them; foods that contain the common allergens casein and gluten.
- Most soy, corn, canola, cotton, and sugar and their derivatives are now made from GMOs, and independent research has confirmed that these substances and the chemicals with which they are sprayed provoke inflammation of the stomach and intestinal lining, and have repeatedly been shown in independent inquiry to damage vital organs.
- Vegetables: A minimum of 4 to 5 cups per day of beetroot, carrots, cruciferous vegetables (broccoli, cabbage, cauliflower and kale), dark, leafy greens (watercress, kale, spinach), onions, peas, sea vegetables and squashes.
- Fruits: 3 to 4 cups per day of healthy fruits like apples, blackberries, blueberries, cherries, nectarines, oranges, pears, grapefruit, pineapple, plums, pomegranates, or strawberries.
- Healthy fats: Focus on unprocessed plant fats like avocados, extra virgin olive oil, nuts and seeds (flax, chia, hemp, pumpkin, sunflower seeds).
- Herbs and Spices: Unlimited amounts of antioxidant-rich herbs and spices like basil, chili peppers, cinnamon, curry powder, garlic, ginger, oregano, rosemary, sage, turmeric and thyme.
- Whole grains, legumes, seeds and some nuts contain “anti-nutrients” like lectins and mineral binding phytates that provoke an inflammatory response in the body. Traditional grain preparation methods like soaking and fermenting help remove these substances.
- Protein: Think organic eggs, grass-fed meats, healthy cheeses, organic poultry and cultured/raw dairy.
- Fresh vegetable juices that curb inflammation include combinations of celery, cucumber, ginger, pineapple, spinach and lemon.
- Water: Make sure enough high quality purified water is consumed to curb inflammation and flush out toxins. Unsweetened herbal teas, green tea or coconut water are other hydrating options.

Lifestyle:

- Lack of sleep and stress directly leads to inflammation in the body. Make sure to get 7 1/2 to 8 hours of restful sleep per night and manage stress with breathing techniques and meditation.
- Exercise every day to get the blood flowing.

MALE HEALTH

HAIR LOSS - ALOPECIA

Hair loss may only occur on the scalp but in more severe cases can even cause loss of eyebrows and eyelashes. It can be genetic but it is also linked to hormones and is more prevalent as we age. Post-menopausal women are more likely to suffer from hair loss and also just after pregnancy due to hormonal changes. Alopecia areata is an autoimmune disease that involves the immune system attacking the cells in the hair follicles.

Men suffer from androgenetic alopecia (AGA) or male pattern baldness - it is often inherited. Sometimes testosterone is converted into DHT (Dihydrotestosterone) and this has been linked to hair loss.

Other factors affecting hair loss: poor circulation, illness, stress, surgery, chemotherapy, weight loss, iron deficiency, low thyroid.

Protocol:

Collagen + B complex + Zinc

Important ingredients:

- Aloe vera: known to support hair health
- Collagen: important proteins to support hair growth
- B complex: for stress management
- Biotin: for thinning hair
- MSM and vitamin C: to synthesise collagen
- Omega 3: Anti-inflammatory and thickens hair
- Saw Palmetto: for male pattern baldness
- Silica: important for hair health
- Zinc: supports immune-, gut-, scalp- and prostate health

Choose from these products:

- Wellness Biotin
- Wellness Vitamin B complex
- Wellness Salmon oil Omega 3
- Solgar Oceanic Silica or Vegetal Silica
- Viridian Balanced Zinc complex
- A. Vogel Prostasan
- Tissue salts #3, #7 & #12

Add on:

- Essential oils - rosemary, cedarwood, lavender, thyme and clary sage
- Dr Organic Hemp Oil Rescue Shampoo
- Simply Bee Rosemary Shampoo
- Curaloe Organic Aloe vera juice

Dietary and lifestyle advice:

- Good quality protein is important
- Eat foods rich in sulphur: broccoli, onions, leeks and garlic
- Eat foods rich in silica: sea vegetables, dark leafy greens and radish
- Avoid using harsh products, use natural hair products.
- Avoid using harsh chemical dyes on the hair

PROSTATE HEALTH

The prostate, a gland in the male reproductive system, is located just below the bladder, between the rectum and the base of the penis. It is about the size of a walnut and grows throughout a man's life. Because the prostate wraps around part of the urethra, where urine passes through, an enlarged prostate may cause issues with urination. The gland can become enlarged, and prostate cancer is one of the most common cancers in men. As you age, it's important to maintain a healthy prostate.

Protocol:

Formulated product + Omega 3

Important ingredients:

- Saw Palmetto, Stinging Nettle root & Opuntia (prickly pear): Herbs shown to assist with prostate enlargement
- Pygeum (African plum tree) & Pycnogenol (Marine pine tree): barks shown to assist with prostate enlargement
- Phyto-nutrients Lycopene, resveratrol, curcumin and catechins: anti-inflammatories and antioxidants
- Beta sitosterol: plant sterol to relieve urinary symptoms
- DIM (Diindolylmethane) & I3C (Indole 3 carbinol from cruciferous vegetables): anti-tumor actions
- Vitamin D3: assist in preventing prostate cancer and prevents tumors from progressing
- Zinc and selenium: antioxidant minerals that support prostate health

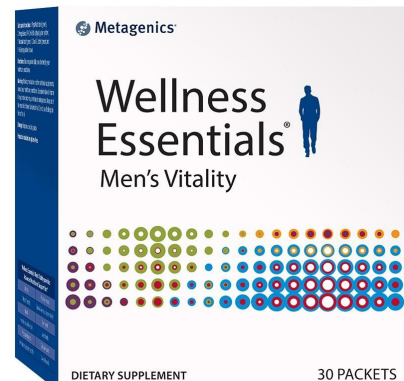

Choose from these products:

Preventative:

- Metagenics Wellness Essentials: Men's Vitality

Therapeutic:

- Metagenics Concentrated Ultra Prostagren
- Nativa Prostate Complex
- Solgar Saw Palmetto Opuntia and Lycopene Complex
- Vibrant Health A Man's Zinc
- Solal Prostate Protection Formula

Add on:

- Omega 3 oil as anti-inflammatory
- Adaptogen & B complex for stress
- Pumpkin seed oil or pumpkin seeds for zinc content
- Drink diuretic teas to prevent UTI's, e.g. Nettle or Buchu

Dietary and lifestyle advice:

- Limit or avoid alcohol and caffeine
- Limit drinking fluids in the evening
- Try to urinate at least once every three hours
- Engage in physical activity
- Maintain a healthy weight
- Increase intake of healthy fats
- Pelvic floor exercises
- Drink green tea for protective catechins
- Eat tomato paste for protective lycopene
- Eat cruciferous vegetables for protective sulforaphanes

Libido is defined as a person's overall sexual drive or desire for sexual activity.

A low libido can strike at any year of your life for a whole variety of reasons, including depression, stress, relationship issues, prescription medications, low testosterone, being overweight, too little exercise, and drug or alcohol use.

Protocol:

Manage stress + enhance circulation + balance hormones

Important ingredients:

- Ashwagandha for stamina and as libido enhancer
- Mucuna pruriens or L-tyrosine to enhance dopamine for drive and motivation
- Fenugreek as female libido enhancer
- Ecklonia cava, L-Arginine, Ginkgo biloba, Korean ginseng, beetroot juice as vasodilators and circulation stimulants
- Tribulus (Tribulus terrestris) and Black maca enhances testosterone

Choose from these products:

- Metagenics HisSynergy and HerSynergy
- Solgar L-Tyrosine
- Sevenpointfive Boost
- Himalaya Confido
- Tibb Erectogen Forte
- The Real Thing Ecklonia Cava Extract
- Herbal Zone Phyto Andro
- Epimedium paste

Add on:

- Black Maca, an adaptogenic herb that helps to increase sexual desire and stamina
- Vitamin B complex to increase blood flow, enhance mood and increase energy levels
- Zinc to support prostate and reproductive health
- Cinnamon or Sandalwood essential oils to balance hormones and combat impotence

Dietary and lifestyle advice:

- Stop smoking
- Consume natural aphrodisiacs such as figs, bananas, watermelon and avocados, nutmeg, cloves and dark chocolate
- Avoid processed foods, sugary foods and refined carbs, excess caffeine and alcohol
- Exercises that increase human growth hormone like weight training and burst training can greatly improve blood flow to the genitals, mood and body perception. Don't over-exercise.

MUSCLE & JOINT HEALTH

ARTHRITIS

Arthritis is characterized by stiff, aching, hard to move joints. The most common type of arthritis is osteoarthritis. Osteoarthritis occurs when cartilage between bones and joints wears down, allowing bones to rub together rather than giving them the protection and cushion they need.

Cartilage is made up of collagen and other substances that make connective tissue both flexible and strong. Cartilage covers the ends of bones where they meet the joints – and deterioration over time can affect the shape and functionality of the joints, making it painful and difficult to carry out everyday tasks.

Protocol:

Alleviate pain & inflammation + rebuild cartilage + topical products

Important ingredients:

- Omega 3, curcumin, cayenne, boswellia, devil's claw: for pain and inflammation
- Papain & bromelain: proteolytic enzymes to curb pain and inflammation
- MSM (sulphur) to alleviate pain and inflammation and synthesise collagen
- CBD oil to alleviate pain and inflammation
- Collagen, chondroitin & glucosamine to rebuild cartilage and bone

Choose from these products:

- Vibrant Health Joint Vibrance
- Remedy Greens Collagen Mobility
- Solgar Extra strength Glucosamine, Chondroitin MSM complex
- Good Health Green Lipped Mussel
- The Real Thing Joint Revolution
- Metagenics Kaprex
- Himalaya Rumalaya

Add on:

- Metagenics Wellness Essentials Active
- Bone broth is one of the best sources of collagen, which contains the amino acids proline and glycine that help rebuild connective tissue. Additionally bone broth supplies chondroitin sulfate and glucosamine, antioxidants that help lower inflammation and pain
- Ointments for pain, stiffness and inflammation: Himalaya RumaLaya gel, BuchuLife First Aid gel and Down to Earth African Potato Cream
- Essential oils: Frankincense (Boswellia), as well as Myrrh, Turmeric, Ginger, Orange, Peppermint and Lavender oils for topical application

Dietary and lifestyle advice:

- Recommend weight loss if arthritis is in weight bearing joints
- Anti-inflammatory diet: no sugar and refined carbs, trans fats and seed oils
- Foods high in sulphur: onions, garlic, cruciferous vegetables such as cabbage
- Foods high in fibre: chia seeds, vegetables and fruit
- Foods high in antioxidants: vitamin C rich foods, colourful fruit and veg
- Ginger: anti-inflammatory and pain management

GOUT

Gout is a painful condition considered a complex form of arthritis that is caused when too much uric acid builds up in the body. High levels of uric acid cause the formation of crystals in the joints, creating intense pain and inflammation. The body produces uric acid as it breaks down purines, which are commonly found in meats, seafood, legumes, alcohol, fructose, yeast and some vegetables. When the body is functioning optimally, the uric acid dissolves into the blood stream and then passes through the kidneys and into the urine where it's released. However, if you have too much uric acid, or your kidneys can't keep up, the acid builds up and forms the needle-like crystals in a joint that cause the intense pain.

Symptoms include severe pain in the big toe, or in joints including feet, ankles, knees, hips, wrists, hands, fingers and back. Noticeable discoloration in the joints; they may become deep red or even purple at onset, and change colour through the attack. Joints might be hot to the touch with a fever, with or without chills. Joints may be inflamed, swollen and tender accompanied by decreased mobility. Hard lumps or bumps at the joints.

Protocol:

Control inflammation & pain + alkalinise body

Important ingredients:

- Curcumin, omega 3, boswellia, devil's claw as anti-inflammatories to manage pain and inflammation
- Bromelain, papain as proteolytic enzymes to minimise pain and inflammation
- Vitamin C and selenium as antioxidants to protect and regenerate cells
- Cherry, celery, nettle and green juices to neutralise acid and break down uric acid crystals

Choose from these products:

- Solgar Cherry Turmeric
- Life Tones or Phyto Force Bio Logic Acid Free
- Nativa Gout Complex
- Tissue Salt #10 to neutralise acid
- Alkaline powders to neutralise acid
- Nutriherb Devil's Claw Celery Selenium
- Himalaya Cystone

Add on:

- Cherry juice and vitamin C: lowers uric acid levels
- Herbs and spices for pain relief: Devil's Claw, Boswellia, Curcumin and Metagenics Kaprex
- Ointments for pain, stiffness and inflammation: Himalaya Rumatol gel, BuchuLife First Aid gel and Down to Earth African Potato Cream
- Essential oils: Frankincense (Boswellia), as well as Myrrh, Turmeric, Ginger, Orange, Peppermint and Lavender oils for topical application

Dietary and lifestyle advice:

- Regular exercise will help flush out uric acid
- Keep hydrated as dehydration might trigger an attack
- Consume cherries and unsweetened cherry juice, filter coffee and celery juice
- Vitamin C rich foods: red bell peppers, cabbage, broccoli, guava, kiwi, oranges, strawberries
- Take Apple Cider Vinegar or freshly squeezed lemon in water 3 times per day to alkalise the body
- Soak affected joints in an Epsom salts or ACV bath

Foods to avoid or minimize:

- Purine-rich foods including: beef, goose, organ meats, sweetbreads, mussels, anchovies, herring, mackerel, yeast, spinach, asparagus, beans, lentils, mushrooms and dried peas
- Oxalate-rich foods including spinach, rhubarb, beets, nuts, chocolate, black tea, wheat bran, strawberries and beans, tomatoes, aubergines and balsamic vinegar
- Common allergens including dairy, wheat (gluten), corn, and food additives
- Refined foods including white breads, pastas and sugar

MUSCLE SPASMS

Spasms are involuntary contractions of one or more muscles. During a leg, neck or back spasm, your muscles cramp up and tighten without you being able to move them, and they stay this way for a period of time because they're unable to relax. Muscle pains and spasms are most likely to occur in the feet, lower back and legs.

Examples of muscle spasms you've probably experienced at some point include menstrual cramps, diarrhoea, lower or upper back pain, or cramping just after exercising. Depleting electrolytes and certain important minerals such as magnesium, potassium and calcium may lead to muscle spasms. Medications that are diuretics (causing you to lose water/fluids) or those that affect your blood pressure or treat high cholesterol (statins), may also cause muscle spasms.

Recommend extra Magnesium and potassium to balance electrolytes, and added Boron if supplemental Magnesium shows no results.

Protocol:

Magnesium & potassium + vitamin B-complex

Choose from these products:

- Wellness Vitamin B-complex
- Metagenics Mg/K
- Tissue Salt #8: MagPhos
- BetterYou Magnesium
- Supplements SA Cramp control

Dietary and lifestyle advice:

- Limit salt intake to correct electrolyte ratios, use natural Himalayan or sea salt to provide full spectrum of minerals or Concentrace Minerals
- Increase vegetable and fruit intake for extra Magnesium and Potassium
- Properly warm up before and cool down after exercise
- Stretch and massage muscles
- Avoid overtraining and plan for proper rest so that muscles can recover
- Keep hydrated
- Take Epsom Salts baths

OSTEOPOROSIS

Osteoporosis is usually a progressive disease and occurs more in women. Small fine boned women are more likely to have osteoporosis. Bone density starts to decline from about 30 and accelerates during the menopause due to a drop in estrogen levels. Osteoporosis can develop as a result of certain medications or chemotherapy. It can also develop due to a lack of nutrients and of poor absorption of calcium into the bones. Bones become weaker and thinner, areas particularly affected are the hips and lower spine. The main concern is that they can break and cause falls or a fall causes a fracture.

It is very important not to use calcium in isolation. Products for osteoporosis prevention should be in a combination formula made up of the following nutrients: calcium, magnesium, boron, vitamin D and vitamin K2.

Important ingredients:

- Vitamin C to synthesise collagen and build bone
- Vitamin D3 and K2 to mobilise and escort calcium into bones
- Boron, especially post menopausal, to keep minerals inside the bone
- Collagen (protein) and silica are important building blocks of bone besides minerals such as calcium and magnesium

Choose from these products:

- Metagenics Wellness Essentials Woman's Prime (contains Bone Builder & Ostera)
- Solgar Ultimate Bone Support
- Solgar liquid calcium, magnesium and vitamin D
- WW Calcium and Magnesium (with added Vit D and Boron)
- Metagenics Bone Builder and Ostera (if post menopause)
- Good Health Supercal
- The Real Thing Bone Revolution

Dietary and lifestyle advice:

- Eat foods rich in calcium and magnesium e.g. dark green leafy vegetables and broccoli. These same foods are rich in vitamin K.
- Exercise is very important especially weight bearing exercise e.g. carrying shopping bags, rebounding, walking
- Avoid stimulants that prevent nutrients being absorbed e.g. alcohol, sugar, caffeine and smoking

- Too much citrus fruit may inhibit calcium uptake
- Avoid foods high in phytates as they can prevent adequate absorption of calcium
- Older people may want to take HCL with their bone supplement to ensure maximum absorption
- Certain medications and diuretics can cause loss of minerals

Note: Have vitamin D levels checked to ensure it is adequately absorbed.

SPORTS PERFORMANCE

MUSCLE GAIN

Amino Acids are the building blocks for muscles. Recommend supplementary dietary protein for heavy trainers and athletes, or when the digestion and uptake of protein is compromised (for instance when stomach acid is low and there is a lack of digestive enzymes, often due to stress, even prolonged or intense physical stress). The Branched Chain Amino Acids (BCAA's) Leucine, Isoleucine and Valine are often recommended for building muscle, repairing muscle tissue and recovery after exercise.

ENERGY, ENDURANCE & STAMINA

Creatine, malic acid, maca, ashwagandha and green tea assist with energy production and vasodilators such as beetroot are often included for better performance. Minerals such as magnesium and potassium are added as important electrolytes.

IMMUNE & OXIDATIVE SUPPORT

L-Glutamine is often included in formulas as it is used by the body in times of stress, including prolonged or intense physical exercise. It prevents the muscles from breaking down and improves immune functioning. Oxidative stress is curbed by antioxidants and anti-inflammatories such as curcumin, boswellia, ginger and hops.

Choose from these products:

- Solgar Whey to Go
- Metagenics BioPure Protein
- Super Nature's Whey Belgium Choc
- Ancient Nutrition Bone Broth Protein
- Vegan Pea Protein
- Hemp seeds

Pre-workout:

To help increase energy prior to activity:

- Vibrant Health Pro Matcha
- Naturally Nourished Pre Workout
- Superfoods Super Chia mix
- MCT oil or powder
- Solgar L-Carnitine

Post-workout:

To help with muscle recovery and get rid of lactic acid:

- PhytoPro Sports Recovery
- Naturally Nourished Post Workout Recovery
- Superfoods Green Shake
- Supplements SA Cramp Control
- Metagenics Inflammation or Inflammation Intensive Care

PAIN AND INFLAMMATION

Joint or muscular pain and inflammation may be caused by sports injuries or over exertion. Topical medications might contain menthol or camphor to cool down the skin, or capsaicin and cayenne pepper to stimulate circulation by producing heat.

Topical products:

- Heel Traumeel Ointment
- Arnica oil or gel (do not use on broken skin)
- Nativa OsteoFreeze Gel
- Threshold Real MSM Gel

Internal products:

- Anti-inflammatories such as curcumin, garlic, ginger, bromelain and boswellia
- Arnica tablets
- Traumeel tablets

NERVOUS SYSTEM

ADRENAL FATIGUE

The adrenal glands are small, triangular-shaped organs found on top of the kidneys. They're responsible for producing several important hormones, including cortisol, aldosterone, dehydroepiandrosterone (DHEA), androgenic steroids, norepinephrine, and epinephrine. These hormones help regulate your immune system, metabolism, blood pressure, response to stress, and other essential functions. If your adrenal glands are not functioning properly, they may over or under produce these hormones, which can lead to several health issues, including fatigue. Adrenal fatigue is a term most commonly used by integrative healthcare providers and functional doctors to describe a collection of symptoms believed to be induced by chronic stress. It's important to note that adrenal fatigue is not currently an accepted medical diagnosis.

Symptoms to look out for are cognitive deficits, decreased libido, depression, chronic fatigue, hormone imbalances, hypoglycemia, hypertension, insulin resistance, irritability, poor stress coping skills, sleep issues and weight gain.

Adrenal insufficiency, also known as Addison's disease, is a recognised autoimmune disorder characterised by insufficient hormone production that occurs when adrenal glands don't make enough of certain hormones. Adrenal fatigue is considered to be a milder form of adrenal insufficiency.

Protocol:

Formulated product + Omega 3 + vit D3 + probiotic

Important ingredients:

- Vitamin C to support adrenal health
- Vitamin B complex (especially B5 and B6) helps the adrenal glands produce healthy amounts of cortisol and is involved in energy production in the body
- L-Theanine or green tea for its calming effect, assists in making serotonin and dopamine
- CoQ10 to assist with energy production
- Adaptogens such as Ashwagandha, Holy Basil, Liquorice, Rhodiola rosea and Siberian ginseng for providing calm energy and normalising the sleep cycle
- Cordyceps mushrooms for stamina and energy
- Adrenal bovine extract may help replenish depleted cortisol in cases of adrenal exhaustion

Choose from these products:

- Metagenics Cortico B5B6
- WW Vitamin B-complex
- WW vitamin C
- Good Health Energy & Vitality
- Solgar Balance Rhodiola Complex
- Metagenics Licorice Plus, Adreset or Exhilirin
- Metagenics Adrenogen
- Himalaya Geriforte
- Tissue Salt #2

Add on:

- Use essential oils such as Peppermint, Rosemary, Orange, Palmarosa and Patchouli
- Adaptogens (see chapter on Stress)
- Matcha or Green tea

Dietary and lifestyle advice:

- Ensure adequate sleep 7-8 hours
- Avoid stimulants such as coffee and sugar
- Balance blood sugar levels by eating unrefined foods
- Avoid alcohol as it can affect the quality of sleep and result in feeling tired
- Check that food intolerances aren't causing the tiredness
- Good quality protein from meat, fish, fowl, eggs, dairy and various plant sources (beans and other legumes, nuts and seeds) is an essential part of any adrenal fatigue diet

ANXIETY

Anxiety disorder can be both acute (panic attacks) or chronic, and usually occurs as a result of stress and the flight or fight response. Headaches are often also experienced with chronic anxiety. Panic attacks can feel very frightening as the person may think they are having a heart attack or stroke.

Protocol:

Vit B & magnesium combo + Omega 3 + Calming nutrients and herbs + Probiotic

Important ingredients:

- B complex vitamins, especially B6, to nourish the nervous system
- Magnesium, the big relaxing mineral
- Omega 3, to support brain health
- GABA, Glycine, L-Theanine and NAC (n-acetyl cysteine) as calming amino acids
- Ashwaganda as calming adaptogen and Melissa (lemon balm) as calming nervine

Choose from these products:

- Viridian Magnesium Citrate with B6
- Viridian B complex with Magnesium Ascorbate
- Better you B12 boost

- Solgar GABA
- Metagenics Nusera
- Metagenics TranQ, Trancor or Serenagen
- Pegasus calming 30c
- Tissue salts #6 & #8

Add on:

- Essential oils of Frankincense, Lavender, Geranium and Melissa
- WW Sceletium tea

Dietary and lifestyle advice:

- Maintain good blood sugar balance
- Make sure the diet has lots of mineral rich foods - vegetables and fruit
- Avoid stimulants especially coffee, chocolate and tea
- Ensure stomach acid is sufficient to support digestion of proteins
- Practice deep breathing and relaxation techniques
- Time in nature and exercise is important
- Adequate sleep is important

ADD (ATTENTION DEFICID DISORDER) & ADHD (WITH HYPERACTIVITY)

More common in children today but was often undiagnosed in the past, these are conditions that affect the central nervous system. It causes a variety of learning and behavioural problems. The main problem is an inability to pay attention and problems with self-regulation and impulse control. As adults they may grow impatient and lose their temper.

Factors linked to these disorders are anxiety, allergies, consumption of food additives, overuse of electronic devices. Diet plays a major role in these disorders.

In some cases it may just mean being able to concentrate better for exams or work. Many products that are used for poor memory can also be used for poor concentration.

Protocol:

Omega3 + Vit D3 + Magnesium & Vit B6 + Probiotic

Choose from these products:

- EyeQ fish oil capsules
- WWH Salmon oil Omega 3
- Sfera Phosphatidyl Serine spray
- Himalaya Mentat syrup for children
- Flordis Keenmind
- Sevenpointfive Mindset
- Metagenics Attencia
- Bio-Logic Brainstorm
- Tibb Xcel kids
- Viridian or Solgar Magnesium & B6

Add on:

- L-Theanine if anxious and cannot concentrate
- Tissue Salt # 6 to support the nervous system
- GABA where particularly hyperactive
- Essential oil of Rosemary (will stimulate)
- Essential oils of Lavender or Vetiver (will calm)

Dietary and lifestyle advice:

- Ensure balanced blood sugar throughout the day with adequate protein and fats
- Important to have low carb, high protein breakfast
- Avoid processed foods and sugar, especially additives such as food colourants
- Avoid fizzy drinks, phosphorous may overstimulate the nerve impulses to muscles
- Eat oily fish and other healthy fats that will feed the brain
- Avoid use of devices or situations that can cause sensory overload

Vision loss and disorders like macular degeneration and cataracts are all caused by the process of oxidative damage, which is why the elderly and people with unhealthy lifestyles are most susceptible to vision loss and eye problems, especially when they're low in certain vitamins. Vitamins and antioxidants, such as lutein and vitamin C, help fight free radical damage in the eyes caused over time by things like poor diet, blue light emissions from computer screens and sun/UV light.

Dry eye syndrome is a common eye condition caused by insufficient or poor tear quality. Pink eye, also called conjunctivitis, is a common eye infection that causes redness, swelling, itching, tearing and a slightly thick, whitish drainage. It's caused by a virus or bacteria, and it's very contagious.

If an irritant (such as dust and dirt) or chemical splashes into the eye, we usually flush it out and clean the eye, which can cause redness and a mucus discharge. The eyes may also be watery and itchy until the irritation has passed.

Important Ingredients:

- Vitamins A and E: fat soluble vitamins that decrease the risk of age-related macular degeneration
- Vitamin C: helps repair damaged tissue and slows down inflammatory responses
- Zinc: for proper cell division and cell growth, maintaining healthy circulation and controlling inflammation
- Lutein and Zeaxanthin: antioxidants that help to protect the eye's tissue, lens and macula, assist clear vision and to prevent glare, light sensitivity or disorders like cataracts
- Omega 3: lowers inflammatory responses, helps fight eye damage caused by diabetes, improves circulation. Also helps for dry eyes - especially flaxseed oil

Choose from these products:

- Solgar Bilberry Ginkgo Eyebright Complex
- Solgar Vision Guard Plus
- Good Health Premium Vision
- Chinaherb Eye Tonic

Add on:

- Similasan eye drops: Dry Eye Relief, Allergy Eye Relief or Pink Eye Relief
- Tissue salts #2 and #12 for cataracts

Dietary & lifestyle advice:

- Eat Omega-3 rich foods and high-zinc foods such as wild-caught seafood (salmon, mackerel, sardines, herring, halibut, tuna) plus grass-fed meat, organic eggs and pasture-raised poultry
- Eat leafy green vegetables (turnip greens, kale, mustard greens, collard greens, spinach)
- Eat cruciferous vegetables (broccoli, cauliflower, cabbage, Brussel sprouts)
- Eat antioxidant rich foods such as colourful fruit and vegetables
- Decrease sugar and alcohol consumption and quit smoking
- Limit screen time, and look away from the screen every 15-20 minutes
- Use a humidifier to help soothe dry eyes
- Soak Tulsi (Holy Basil) or Green tea leaves in boiled water for 10 minutes. Then use the water as an eyewash, or soak a clean cotton pad or washcloth in the water and use it as a warm compress. Antibacterial and antiviral
- Wear sunglasses when outdoors to protect against sun damage or dust

INSOMNIA

Not getting a full night's sleep for over a month is considered to be chronic insomnia.

Insomnia can be an inability to fall asleep, or waking up in the middle of the night and being unable to fall back to sleep.

Insomnia can be due to stress, anxiety and depression, it can also be due to a physical condition such as chronic pain. Caffeine, over stimulation and jet lag can also cause insomnia.

Protocol:

Magnesium + Calming or Sedative herbs

Important ingredients:

- Magnesium: the relaxing mineral
- Adaptogens to address stress and reestablish sleep cycles: Ashwagandha
- Nervines to calm the mind and body: chamomile, lemon balm, valerian
- Sedatives: californian poppy, hops, blue vervain, passion flower

Choose from these products:

- Metagenics MetaRelax
- Good Health Fast Asleep or Deep Sleep
- Flora Force Sleep
- WW Valerian or Sleep Aid
- WW Sceletium Night
- Pegasus sleep 30c
- Heel Neurexan
- Flordis ReDormin
- Boiron Sedatif PC

Add on:

- Tulsi Sleep tea
- WW Calming tea
- Essential oils of Lavender, Chamomile, Basil, Vetiver
- Tissue salts #2, #3 and #6

Dietary and lifestyle advice:

- Avoid stimulants from lunch time onwards: coffee, tea and nicotine
- Avoid heavy meals in the evening and eat 3 hours before bedtime
- Establish set habits before bed time, no devices 2 hours before bed, dim the lights, calming music
- Eat a snack rich in tryptophan before bedtime to help promote sleep: bananas, dates, nut butters, grapefruit or yoghurt
- Go to bed at the same time and wake up at the same time
- Get early morning sunlight, sleep in a dark room (this can help reconfigure wake/sleep cycle)
- Bed is only for sleep, don't read or work in bed
- Exercise in the afternoon or early evening
- Decrease stress to balance hormones

LOW MOOD

Long term stress can have an effect on one's mood, it may be accompanied by insomnia or oversleeping (struggling to get up in the morning), lack of interest in the pleasures of life, loss of energy and fatigue, difficulty concentrating and lessened productivity. There may also be guilt or anger and irritability that isn't expressed.

In winter many suffer from Seasonal Affective Disorder (SAD) due to longer nights and less sunlight during the day. Mood may also be affected by food allergies or prescription medication. It can also be as a result of nutritional deficiencies or low thyroid function.

If someone is suffering from depression they need to consult a healthcare practitioner.

Protocol:

Omega 3 + vitamin D3 + Probiotic + Formulated product

Important ingredients:

- Vitamin B complex to nourish the nervous system and provide energy, at least 50mg of each B vitamin
- Vitamin D3 proven to assist with low mood
- Healthy fats to support brain health: Omega 3, MCT oil, phosphatidylserine
- Herbs and spices shown to lighten and brighten mood: saffron, scelletium, turmeric
- Probiotics to support gut & brain axis

Choose from these products:

- Omega 3 oil especially high levels of EPA e.g. OmegaUP
- Solgar Megasorb Vitamin B complex
- Coyne Healthcare Felix
- Releaf Emozac
- WW Sceletium Day & Night
- Sevenpointfive Boost

Add on:

- Adaptogenic herbs such as Ashwagandha, Holy Basil or Rhodiola rosea
- Essential oils: Ylang Ylang, Lavender, Melissa, Basil, Clary Sage

Dietary and lifestyle advice:

- Avoid comfort eating
- Avoid stimulants: coffee, tea, alcohol and cigarettes
- Avoid sugar and processed foods
- Ensure there is enough good quality protein in the diet as well as complex carbohydrates
- Regular, moderate and enjoyable exercise such as walking or dancing is very important to help elevate the mood
- Find ways to connect with people and with nature
- Be of service to your community or somebody in need
- Get some sunshine

MEMORY PROBLEMS

Memory lapses are more common as we age. There is a greater prevalence of developing dementia or Alzheimers in old age. Memory loss can be due to nutritional deficiencies. The neurotransmitter acetylcholine is needed to ensure good memory function. Free radical damage as we age can also contribute to poor memory, as can being stressed.

Protocol:

Omega 3 + vitamin D3 + Probiotic + Formulated product

Important ingredients:

- Vitamin B complex to nourish the nervous system and provide energy
- Vitamin D3 proven to support memory and cognitive function
- Healthy fats to support brain health: Omega 3, MCT oil, phosphatidylserine
- Amino acid that affects alertness, concentration, focus, memory and mood and curbs inflammation: L-Glutamine
- Amino acid that helps provide energy to the brain: Acetyl-L-Carnitine
- Herbs known to enhance circulation and brain health: Ginkgo biloba, Bacopa monnieri, Gotu Kola, rosemary
- Probiotics to support gut & brain connection
- Antioxidants to combat oxidative stress and ageing

Choose from these products:

- Sfera Phosphatidyl Serine spray
- Sfera Memory Care
- Metagenics Ceralin Forte
- Himalaya Mentat
- Viridian Cognitive complex
- Phyto-Force Biologic Brain storm
- Solal Brain Booster
- Good Health Brain Power

Dietary and lifestyle advice:

- Reduce stress
- Keep mentally active - if you don't use it you lose it
- Learn something new: a language, playing a musical instrument or bridge
- Get enough exercise and sleep
- Limit intake of sugar and alcohol

STRESS

Stress can be both physical and psychological and has become very much a part of our daily lives. It's how we react to physical, mental, emotional or social situations. Stress can be a contributing factor to a number of chronic conditions, so finding ways to manage and cope with stress is very important.

The stress response involves hormones such as adrenaline and cortisol that are produced in the adrenal glands. With adrenaline blood pressure rises, heart rate increases, blood moves to the muscles and away from digestion. Fat and glucose are released from cells. This is called the "fight or flight" response and is there to protect us from imminent danger.

Today stress is ongoing and continuous elevated levels of adrenaline, as well as an imbalance of cortisol, can have an impact on our bodies. Because we don't digest when stressed deficiencies may start to occur. Heightened blood sugar levels cause systemic inflammation and may contribute to many chronic diseases.

Important nutrients:

- B complex (especially B5 & B6) and vitamin C are always depleted when we stress
- Magnesium: the relaxing mineral

Important Adaptogenic Herbs:

- Calming: Ashwagandha, Tulsi (Holy Basil) and medicinal mushrooms such as Reishi
- Energising: Rhodiola, Siberian Ginseng and Korean Ginseng
- Harmonising: Licorice

Choose from these products:

- WW Sustained release vitamin C & WW B complex
- Solgar Ultimate B + C-Complex
- Viridian High 5 B complex
- Good Health B Stress Free
- Solgar Balance Rhodiola Complex
- Viridian Enhanced Rhodiola Complex
- Metagenics: Serenagen, Adreset, Licorice Plus, Exhilarin
- Good Health Stress & Vitality
- Chinaherb Calm Shen
- WW Siberian Ginseng
- Tibb StressAway

Add on:

- Tulsi Wellness tea
- WW Sceletium tea
- Pukka Relax tea
- Essential oils of Lavender, Clary Sage, Geranium and Citrus oils

Dietary and lifestyle advice:

- Lifestyle factors should not be underestimated when dealing with stress
- Eat only when calm and relaxed
- Avoid stimulants like coffee, alcohol, cigarettes and recreational drugs
- Mindfulness, meditation and breathing techniques are all helpful
- Exercise is important but should not produce more stress, good forms of exercise are yoga, pilates, dancing, swimming and walking (something that is enjoyable)
- Make time to disconnect from technology
- Make sure to get enough sleep

SKIN HEALTH

ACNE

Acne is a skin condition that occurs when the hair follicles become plugged with oil and dead skin cells. It often causes whiteheads, blackheads or pimples, and usually appears on the face, forehead, chest, upper back and shoulders. It's common when hormonal changes occur such as during adolescence or in pregnancy. The liver often becomes sluggish and unable to clear toxins efficiently.

Protocol:

Formulated product + Omega 3 + skin products

Important ingredients:

- Omega 3 as anti-inflammatory and to balance hormones and for skin health
- Vitamin A, C and E as well as zinc and selenium as antioxidants for skin health
- Collagen or Aloe Vera juice for skin support

Choose from these products:

- China Herb Acne Formula
- Mapp10 – Intensive Pack
- Mapp10 – Maintenance Pack
- Solal Problem Skin Formula
- Viridian Clear Skin

Add on:

- Alba Botanica Acnedote range
- Thursday Plantation Tea Tree Daily face wash
- Thursday Plantation Blemish gel
- Himalaya Purifying Neem Foaming face wash
- Himalaya Acne 'n Pimple cream
- BaoCare Acne oil
- Victorian Garden Healing Facial oil

Dietary and lifestyle advice:

- Eat a wholesome diet with healthy fats and clean proteins
- Minimise dairy products for 6 weeks to see how it affects hormonal health
- Support gut and liver health as it shows on the skin

BOILS

A boil is an infection of the skin typically caused by Staphylococcus (Staph) bacteria. At its worst, it can be quite red, swollen and painful to the slightest touch. A bacterially infected hair follicle or oil gland is usually at the root of a boil's formation. As this bacteria flourishes, a pocket of pus starts to form, and the boil often begins to balloon outward with a liquid-filled centre. The most common areas for boils to occur are places on the body where there's a lot of friction and sweat, like the armpits and buttocks.

Protocol:

Antibacterial + blood cleanser + topical product

Choose from these ingredients:

- Tissue Salt #3 as blood cleanser
- Tissue Salt #5 as an anti-inflammatory
- Tissue Salt #12 for drainage and healing
- Antibacterial herbals such as garlic, goldenseal, olive leaf

Add on:

- Vitamin C and zinc
- Bettamed Cleanse and Recover liquid
- Tea tree oil or colloidal silver as topical treatment to disinfect

Dietary and lifestyle advice:

- Practice good hygiene but skip dangerous antibacterial soaps. Wash your hands frequently.
- Boils can be very contagious - don't share clothing, towels, bedding or sporting equipment with others while you have a boil
- If the boil doesn't respond to home treatment after a week or you exhibit other symptoms such as fever and swollen lymph nodes, seek medical attention

COLD SORES

Cold sores are inflamed blisters in or near the mouth, caused by infection with the herpes simplex virus. It is commonly called fever blisters. Often appear when people are stressed or after sun exposure. Recommend antiviral internal medications to enhance the effect of topical treatments.

Protocol:

Antivirals + immune support + topical product

Important ingredients:

- Vitamin B complex to support nerve health
- Vitamin C, L-Lysine, and zinc as antiviral nutrients
- Elderberry, olive leaf, oregano and ginger as antiviral herbals
- Astragalus as long term immune modulating support

Choose from these internal products:

- Honeyguide Propolis Tincture
- Bettamed Cleanse and Recover Liquid
- Solgar Beta Glucans & Elderberry Immune Complex
- Solgar Astragalus Root Extract
- Pegasus anti-virabac 200c

Choose from these topical products:

- Bettamed Cleanse and Recover Cream
- Peppermint essential oil and Tea tree essential oil
- Aloe Vera Gel

Dietary and lifestyle advice:

- Eat an immune boosting diet containing colourful and fresh fruit and veg
- Replace your toothbrush
- Wash face cloths and towels very well in hot water
- Do not touch the sores as you will spread the virus
- Apply ice to help with pain and swelling

One of the most common skin disorders that causes a rash is atopic dermatitis, also known as eczema. It's an ongoing (chronic) condition that makes skin red and itchy. Most often it appears as patches on the hands, feet, ankles, neck, upper body and limbs. It tends to flare up periodically and then subside for a time. Topical products on its own will not cure eczema, dietary intervention is required to get to the cause. Attend to liver and gut health as imbalances there will present as skin issues.

Important ingredients:

- Omega 3 and GLA (Evening Primrose oil) to support skin health and as anti-inflammatories
- Vitamins A, C and E, zinc and selenium to support skin health
- Phytonutrients lutein, astaxanthin and lycopene for skin health
- Probiotics that contain the strain *Lactobacillus rhamnosus*

Choose from these internal products:

- China Herb Dry Eczema Formula
- Garden of Life Icelandic Cod liver oil
- WWH Salmon Oil Omega 3
- Solgar Evening Primrose oil

Add on:

- Fermented foods and drinks such as kombucha and kefir water and milk
- Bone broth or Collagen

Choose from these topical products:

- Hope's Relief Moisturising Lotion or Itchy Dry Skin Cream
- Bettamed Care Cream
- BaoCare Eczema Oil
- Bee Natural Eczema and Skin Ailment Relief
- Victorian Garden Eczema Cream

Dietary and lifestyle advice:

- Eat a wholefoods diet without additives and processed foods
- Can be related to food sensitivities such as dairy and sugar
- Attend to gut health with bone broth, Aloe Vera juice and Probiotics
- Drink half a glass of Aloe vera juiced topped with kombucha every morning on an empty stomach
- Avoid harsh soaps and detergents containing irritants and chemicals
- Epsom salt baths or oat meal baths help to relieve itchiness

FUNGAL INFECTIONS

Fungal skin infections usually show up as red, itchy, peeling skin rashes. Ringworm, candida, jock itch, and athlete's foot are just a few examples of fungal skin infections. Pool areas, locker rooms, public showers and other areas prone to dampness are prime locations to pick up a fungal skin infection. They are also most likely to develop in damp areas of the body, such as the feet, the nails or armpits.

Protocol:

Antifungal herbal + topical product

Important ingredients:

- Grapefruit seed, oregano and pau d'arco as antifungal herbals

Choose from these internal products:

- Viridian Grapefruit Seed Extract
- Amipro Citricidal Liquid or Citricidal Plus Capsules
- Solgar Wild Oregano Oil
- Bettamed Cleanse and Recover Liquid
- Phyto-Force Pau D'Arco tincture

Choose from these topical products:

- ProGuard Anti-Fungal Foot Spray and Anti-Fungal Nail Sollution
- Bettamed Anti-Fungal Nail Drops
- Bettamed Cleanse and Recover Cream
- Earthsap Tea Tree Foot Powder, Foot Spray and Foot Cream
- Coconut oil as an antifungal topical application

Dietary and lifestyle advice:

- It's important to make sure skin is dry and that clothing allows skin to breathe
- For fungal infections on toe nails use a hair dryer to dry out the area after washing
- Wear cotton socks and ideally open shoes

RASHES

Skin rashes can occur from a variety of factors, including infections, heat, allergens, immune system disorders and medications. Many childhood diseases such as chickenpox, measles, German measles and scarlet fever have viral or bacterial causes and include a rash of some type. Remember to attend to the cause of the rash by giving appropriate antibacterial or antiviral internal support too and to support gut and liver health as rashes will present when these systems are overburdened.

Rashes may cause severe itching, dryness and scaling of skin.

Choose from these products:

- Bettamed Care Cream
- Curaloe Relieving Aloe Vera Gel
- Ultra Bee range of products
- Hope's Relief Moisturising Lotion
- Down to Earth African Potato Cream
- Silver Lab Colloidal Silver Cream or Spray

Add on:

- Tissue Salts #5, #7, #9, #11
- Treat hives with nettle as a tincture or herb

Dietary and lifestyle advice:

- Avoid harsh soaps and detergents containing irritants and chemicals

PIGMENTATION

Pigmentation concerns can be divided into hypopigmentation (light patches) and hyperpigmentation (dark patches). The patches may be large (e.g. Vitiligo) or they may be barely perceptible. There are more than 70 different pigmentation disorders.

Hyperpigmentation can be caused by sun damage, inflammation of the skin such as acne or due to hormonal changes. Darker skins are more prone to hyperpigmentation and it is caused by excess production of melanin. Melasma is hyperpigmentation on the face and is usually as a result of hormonal changes during pregnancy. It may look like a butterfly pattern on the cheeks.

Protocol:

Vitamin B complex + B12 and Folate + vitamin C

Important ingredients:

- Vitamin B complex, and B12 and folate
- Antioxidants: Vitamins A, C, D and E
- Minerals: zinc & copper
- Phytonutrients: pycnogenol, resveratrol
- Ginkgo biloba: may assist with repigmentation in Vitiligo

Choose from these products:

- Natura Pigment
- Viridian High Potency Pycnogenol
- Coyne Liposomal vitamin C
- Metagenics Intrinsi B12 Folate
- Viridian Balanced Zinc Complex

Skin care products:

- Pradance: Face wash, facial toner, day lotion, night serum
- Dr Hauschka: Intensive Treatment for Menopausal Skin
- Esse: Refining Cleanser, Cream Mask, Ageless Serum
- Victorian Garden: Pigmentation Cream
- Gaia: Pigment Controlling Night Cream, Royal Bio Nutricell Day Face Lotion, Gold Range Fruit Acid Mature Skin Toner
- Phyto-Force: Kigelia cream
- Apple Cider Vinegar as a toner
- Aloe vera gel
- Argan, rosehip oil

Dietary and lifestyle advice:

- It takes time to reduce hyperpigmentation
- Protect skin from sun damage by wearing sunscreen or a hat
- Consume foods high in phytonutrients
- Support liver health
- Take steps to balance hormones
- Curb inflammation
- Manage stress

SHINGLES

Shingles is caused by the same virus as chickenpox. The older you get the higher your risk of shingles. The symptoms are nerve pain; a red rash with itching, burning, numbness or sensitivity to touch, fever and fluid-filled blisters. Persons who are more likely to get shingles are those with a weakened immune system or who have been recently ill, people older than 50 years of age, those who are under excessive stress or who have experienced recent major trauma. Shingles may return often so it is important to support immune health over the long term.

Protocol:

Antivirals + immune support + nerve support + topical products

Important ingredients:

- Vitamin B complex to nourish the nervous system
- Vitamin C, L-Lysine and zinc to boost immunity and as antivirals
- Elderberry, oregano or olive leaf as herbal antivirals

Choose from these products:

- Solgar Beta Glucans & Elderberry Immune complex
- Good Health Viralex
- Solgar Elderberry Extract
- WW Olive leaf tincture
- Tissue Salts formula: #9 + #5 + #6 (3 x per day) and #2 + #4 (2 x per day) for 4 weeks

Add on:

- Bettamed Cleanse and Recover cream
- Ginger tea as antiviral
- Geranium essential oil in coconut oil to apply to skin
- Manuka honey to apply to skin
- Bathe in tepid water with oatmeal and colloidal silver to help with itching
- Use cool, wet compresses on blisters to help with pain, sensitivity and itching
- Vitamin B12, ALA and Homeopathic Hypericum (single remedy from a Homeopath) for nerve damage and pain

Dietary and lifestyle advice:

- Hydration is very important
- Eat colourful fruit and veg and leafy greens to support immunity
- Raw garlic and onion contain allicin, which can help boost immune function
- Reduce stress with breathing exercises, yoga or meditation

WARTS

Warts are raised overgrowths of skin that look like little cauliflowers. It is caused by the human papillomavirus (HPV). Although warts generally aren't dangerous, they are unsightly, potentially embarrassing, and contagious. They can also be painful. Recommend antiviral internal medications to enhance the effect of topical treatments.

Internal products:

- Natura Thuja tablets
- Vitamin C
- L-Lysine
- Zinc
- Ginger tea
- Antiviral herbs: Elderberry or Olive leaf tinctures

Topical products:

- Natura Thuja Lotion Plus
- Essential oils of Oregano, Tea tree used very carefully
- Colloidal silver covered with a plaster overnight

URINARY HEALTH

UTI (URINARY TRACT INFECTION)

This refers to an infection anywhere in the urinary tract, such as the bladder, kidneys, ureters or the urethra. The kidneys and bladder are involved in eliminating water soluble waste from the body. Bladder infections caused by bacteria are more common in women than men. Often bladder infections are a result of bacteria transmitted from the anus.

Symptoms include an urgent need to urinate, frequent urinating and a persistent feeling to urinate even though the bladder is empty. There may be a heaviness or painful sensation when urinating. The urine may be cloudy with a strong odour and there may be blood in the urine. There may also be pain in the lower abdomen and back.

If a bladder infection is left untreated it may travel up to the kidneys and cause a kidney infection.

Protocol:

Antibacterial + D-Mannose + Probiotic

Important ingredients:

- Bearberry (*Uva ursi*), juniper, buchu, goldenseal: diuretic, antiseptic, astringent actions
- D-mannose (from cranberries): inhibits adherence of bacteria to bladder wall

Choose from these products:

- Good Health Uricleanse
- Vibrant Health U.T. Biotic
- Solgar Cran Flora
- Solgar Uva Ursi & Juniper Formula
- DMannose UTI solution
- WW Goldenseal and/or Echinacea
- Probiotics especially Metagenics UltraFlora Women
- Himalaya Cystone
- Natura Urina and Diureta
- Tibb Renotone + Septogard

Add on:

- Unsweetened cranberry juice
- Wellness Buchu water
- Wellness Dandelion or Buchu tea
- Vitamin C
- WW Alkaline powder
- Nature Fresh Intimate Cleanser with Rooibos and probiotics

Dietary & lifestyle advice:

- Consume enough water
- Taking 1 teaspoon of bicarbonate of soda can help make the urine more alkaline and relieve the burning sensation or use WW Alkaline powder
- Parsley and celery juice are very beneficial for cleansing the bladder
- Barley water is anti-inflammatory and can help. Boil 40g of rinsed barley in 1 litre of water, simmer for 40 minutes. Add lemon juice, strain and drink throughout the day
- Avoid stimulants (coffee, alcohol, spices) and sugar
- A UTI often reoccurs so continue to use treatments after the symptoms have ceased
- Make sure to urinate when you need to, don't hold it in
- Take showers instead of baths, wipe front to back when emptying bladder or bowels
- Avoid using panty liners and make sure to only wear bamboo or cotton underwear
- Douche with a tea tree intimate wash or Nature Fresh Intimate Cleanser with Rooibos and probiotics

WEIGHT MANAGEMENT

Being overweight or obese has been linked to many degenerative diseases such as high blood pressure, metabolic syndrome, diabetes, osteoarthritis and premature death.

A reliable, simple and inexpensive method to assess body fat percentage without using sophisticated equipment is the relative fat mass index (RFM). Measure height and waist circumference with a tape measure, then plug the figures into the below formula. To get the best results for your waist, put the tape measure at the top of your hip bone and wrap it around your body.

Men: $64 - (20 \times \text{height/waist circumference}) = \text{RFM}$

Women: $76 - (20 \times \text{height/waist circumference}) = \text{RFM}$

Example:

A 170cm tall female with a waist circumference of 80cm

$170/80 = 2.125$

$2.125 \times 20 = 42.5$

$76 - 42.5 = 33.5\%$

(www.omnicalculator.com)

Percentages of 40%+ for females and 30%+ for males indicate obesity and higher mortality risk.

Weight gain may be due to poor dietary choices, especially eating too many refined carbohydrates and sugar. Carbohydrates and sugar are broken down into glucose, any glucose that is not used for energy by the cells is stored as fat. Low thyroid function, menopause, stress and emotional eating may all lead to weight gain. It is important to be aware of the possible underlying causes and for the person to be realistic about what can be achieved. Often it is better for the customer to work with a practitioner to achieve long term weight loss.

While everyone is looking for a quick fix for weight loss most supplements work in conjunction with dietary and lifestyle modifications.

Weight loss products may aim to: suppress appetite, increase metabolism, burn fat or balance blood sugar - find out what the customer struggles with.

Important ingredients:

- Spirulina - rich in nutrients, helps sustain energy and stabilises blood sugar
- Berberine – to stabilise blood sugar and reduce cholesterol
- Chromium - for sugar cravings take 200ug twice a day
- Kelp - to help with low thyroid due to iodine content, helps improve metabolism
- L-Carnitine - helps to burn fat, good to take pre-exercise
- Garcinia cambogia - contains hydroxycitric acid (HCA) which suppresses appetite, increases serotonin (emotional eating) and boosts fat burning (thermogenesis)
- Gymnema Sylvestre - reduces the desire for sweet foods, improves blood sugar and aids weight loss
- Green tea - is a stimulant, helps boost metabolism and stimulates fat burning
- Hoodia - for appetite suppression
- Coleus Forskolol - may aid thermogenesis (fat burning)

Choose from these products:

- Coyne Healthcare Berberine Advanced
- NutriLife Multi Action Weight Loss Formula
- Afrigetics Weight loss
- Wild-Beach Please Burner
- Sfera Coleus Forskohlii
- Metagenics UltraMeal Daily Support or Ketogenic Shake (if on LCHF diet)

Add on:

- Omega 3 supplement
- Nature's Nutrition Super Greens and Reds
- The Real Thing Green Power (contains iodine)
- Using diuretics such as Dandelion may help with water retention

Dietary & lifestyle advice:

- Doing a month-long detox is a good way to begin any weight loss programme e.g. Good Health Body Cleanse or Phyto Force Phyto-cleanse tea or Wellness Herbal Detox tea
- Reducing amount of carbohydrates one eats, especially in the evening
- Choosing complex carbohydrates from vegetables and fruits rather than refined processed foods
- Eating nutrient-dense food rather than low nutrient high-calorie food e.g. 100 calories from white bread is very different from 100 calories from broccoli
- Be aware of empty calories in alcohol
- Not eating late at night
- Doing intermittent fasting, eating within a smaller window
- Breakfast like a king (protein with breakfast) lunch like a prince and dinner like a pauper
- Regular dieters may struggle to lose weight as their body keeps a fat reserve for times of starvation (when dieting)
- Portion size is important to bear in mind
- A Mediterranean diet is often encouraged and good results have been achieved with following a Low Carb High (Healthy) Fat diet
- Also avoid "low fat" and "zero" products as they contain hidden sugars and artificial sweeteners.
- Be aware of any food intolerances causing weight gain
- Eat food raw, steamed or baked, never deep fried
- Exercise - a combination of weight-bearing and High-Intensity Interval Training (HIIT) and any exercise that is enjoyable
Muscles use more energy than fat cells
- Find ways to reduce stress
- Don't chew gum
